

# Indian Consumer Durables Industry – Room Air-Conditioners

---

Industry grappling with a cold wave  
of challenges

SEPTEMBER 2025

[Click to see full report](#)

*ICRA projects the sales volume for the Indian RAC industry to contract to approximately 11.0–11.5 million units in FY2026 from 12.5–13.0 million units in FY2025, primarily due to the unseasonal rainfall during the summer, which impacted demand in Q1 FY2026.*

*The domestic RAC industry is estimated to have experienced a 15–20% YoY decline in volumes during April–July 2025. This led to a significant build-up in channel inventory, which has doubled to around 2.5 million units.*

**ICRA projects a 10–15% YoY decline in Indian room air-conditioner (RAC) industry volumes in FY2026**, following a robust 20–25% growth in FY2025 that had pushed volumes to a record 12.5–13.0 million units. The decline projected for FY2026 is attributed to the unseasonal rainfall this year during the peak season for RAC sales (April–July), which was 17% above normal—significantly higher than the around 1% excess recorded in the same period last year. This compressed RAC volumes in 4M FY2026 by around 15–20% in YoY terms, which will, however, be partly compensated by sales during the rest of the year due to favorable summer expectations in the Western and Southern regions during H2 FY2026.

**Reduction in the goods & services tax (GST) rate on RACs (under 2 tonne) to 18% with effect from September 22, 2025, against 28% earlier**, is likely to reduce the prices of RACs by around 6–8%, or around Rs. 2000–3000 per unit, thus boosting demand. ICRA projects the reduction in the GST rate to more than offset the price rise related to the implementation of the new Star label guidelines in January 2026.

**The long-term demand outlook for the RAC industry, however, remains healthy with a forecasted compounded annual growth rate (CAGR) of 10–15% in volumes between FY2026 and FY2030**, driven by structural factors such as rising temperatures, increasing RACs per household, urbanisation, higher disposable incomes, and easier consumer financing. Additionally, replacement demand—especially for energy-efficient inverter models—continues to be a key growth driver.

**India's domestic RAC manufacturing capacity, currently at 24–26 million units annually**, is projected to grow to 30–32 million units by CY2027 and 40–42 million units by CY2030, reflecting a 40–50% increase, to meet rising demand. Leading original equipment manufacturers (OEM) and contract manufacturers have announced capital expenditure (capex) plans of Rs. 4,500–5,000 crore between FY2026 and FY2028 to drive this increase in capacity.
