IIFL Finance Limited: Rating confirmed as final for PTCs backed by gold loan receivables issued by Shining Metal Trust March 2021

Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
Shining Metal Trust March 2021	PTC Series A	400.00	[ICRA]AAA(SO); provisional rating confirmed as final

*Instrument details are provided in Annexure-1

Rationale

In March 2021, ICRA had assigned a Provisional [ICRA]AAA(SO) rating to PTC Series A issued by Shining Metal Trust March 2021. The pass-through certificates (PTCs) are backed by a pool of Rs. 479.95 crore gold loan receivables (underlying pool principal of Rs. 419.70 crore) originated by IIFL Finance Limited (IIFL). Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating has now been confirmed as final.

A summary of the pool performance after the latest weekly June 2021 payout is shown in the table below:

Parameter	Shining Metal Trust March 2021
Number of weekly payouts	12
Pool amortisation	16.31%
PTC Series A amortisation	20.82%
Cumulative collection efficiency*	126.66%
Loss-cum-0+ dpd	6.17%
Loss-cum-90+ dpd	0.00%
Cumulative cash collateral (CC) utilisation	0.00%

*includes overdue and prepayment collections

Key rating drivers

Credit strengths

- Availability of credit enhancement in the form of subordination, EIS and CC
- No overdue contracts in the pool as on pool cut-off date

Credit challenges

- Moderate geographical concentration in the pool at the state level
- Moderate loan-to-value (LTV) profile with moderate share of higher LTV contracts
- Decline in collections witnessed in Apr-21 and May-21 due to the second wave of the Covid-19 pandemic; however, gradual recovery expected as lockdowns ease and fresh infections reduce

Description of key rating drivers highlighted above

IIFL would assign the future receivables arising from the selected pool of loans to a special purpose vehicle (trust). The trust would issue a single series of PTC Series A amounting to 95.31% of the total pool principal backed by the assigned loan against gold receivables.

The first line of support for the Series A PTCs in the transaction is in the form of a subordination of 4.69% of the pool principal (includes over-collateralisation). All collections from the pool that are in excess of the promised weekly interest payout to the PTCs would be utilised to accelerate the amortisation of the PTCs. The scheduled PTC principal payout at the end of the weekly payouts will be revised accordingly. The entire principal amount is promised to PTC Series A in a single bullet instalment on the scheduled maturity date.

A CC of 7.00% of the initial pool principal provided by IIFL acts as further credit enhancement in the transaction. In the event of a shortfall in meeting the promised weekly interest payouts and the principal on the scheduled maturity date, the trustee will utilise the CC to meet the shortfall. Additionally, the subordination and EIS available in the structure will provide credit enhancement support.

There are no overdues in the pool as on the cut-off date. The pool consists of loans that have low seasoning with a weighted average seasoning of 3.4 months. It has a moderate LTV profile with an average LTV of around 53% at the time of loan disbursement. The pool has moderate geographical concentration with the top three states contributing around 44% to the pool principal. The pool's performance will remain exposed to any fresh disruptions that may arise due to the Covid-19 pandemic. Severe restrictions or lockdown like situations due to the pandemic would impact the collections in the near term and a possible increase in delinquencies.

Performance of past rated pools: ICRA has rated 35 PTC gold loan transactions of IIFL till date with the last PTC transaction rated in June 2021. All the pools, except the pools rated post Oct-20, have fully matured. The delinquencies in all the matured pools were low while the prepayments were high. The live pools have shown high prepayment and low delinquencies in the harder buckets with nil 90+ dpd and nil CC utilisation.

Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential delinquencies (shortfall in principal collection during the tenor of the pool) and prepayments in the pool. The assumptions for the shortfall in collections are arrived at after taking into account the past performance of the originator's portfolio and the rated pools as well as the characteristics of the current pool being evaluated. Additionally, the assumptions may be adjusted to account for the current macroeconomic situation as well as any industry-specific factors that ICRA believes could impact the performance of the underlying pool contracts.

After making these adjustments, the expected mean shortfall in principal collection during the tenure of the current pool is estimated at 2.0-3.0% with certain variability around it.

Liquidity position: Superior

The principal amount on the rated PTCs is promised on the scheduled maturity date. Only the interest amount is promised on a weekly basis. This structural feature imparts significant liquidity to the transaction as even a small amount of collections in the underlying pool of contracts would be sufficient to meet the promised PTC payouts. Additionally, a CC is available in the transaction. The cash flows from the pool and the available credit enhancement are expected to be comfortable to meet the promised payouts to PTC Series A investors.

Rating sensitivities

Positive factors – Not applicable (as the instrument is rated at the highest level on the long-term rating scale)

Negative factors – The rating could be downgraded on the sustained weak collection performance of the underlying pool of contracts, leading to high delinquency levels and a decrease in the cover available for the future PTC payouts from the credit enhancement.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Complexity level of the rated instrument

Instrument	Complexity Indicator
PTC Series A	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional, or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: www.icra.in
