Rationale and key rating drivers

ICRA has reaffirmed the ratings of [ICRA]AAAmfs (pronounced ICRA triple A m f s) for UTI Treasury Advantage Fund, UTI Ultra Short Term Fund and UTI Corporate Bond Fund, [ICRA]A1+mfs (pronounced ICRA A one plus m f s) for UTI Money Market Fund, UTI Liquid Cash Plan and UTI Overnight Fund and [ICRA]BBBmfs@ (pronounced ICRA triple B m f s) for UTI Bond Fund and UTI Dynamic Bond Fund and [ICRA]BBB-mfs@ (pronounced ICRA triple B minus m f s) for UTI Banking and PSU Debt Fund. These ratings have been reaffirmed following ICRA's monitoring of the credit risk profile of the month-end portfolio position of these schemes. The credit risk scores for these schemes were comfortably within the benchmark limits for their current rating levels.

ICRA has also reaffirmed the ratings of [ICRA]AAA(SO) (pronounced ICRA triple A structured obligation) for UTI Capital Protection Oriented Scheme Series X (Plan 2) and UTI Capital Protection Oriented Scheme Series IX (Plans 1, 2 & 3) of UTI Asset Management Company Limited (UTI AMC). The letters, SO, in parenthesis, suffixed to a rating symbol stand for structured obligation. An SO rating is specific to the rated issue, its terms and structure. SO ratings do not represent ICRA's opinion on the general credit quality of the issuers concerned.

As on November 30, 2019, the gross exposure to the IL&FS special purpose vehicle (SPV), Jorabat Shillong Expressway Limited (JSEL), stood at Rs. 74.91 crore (14% of the gross assets under management; AUM), Rs. 89.01 crore (17% of the gross AUM) and Rs. 58.23 crore (31% of the gross AUM) for UTI Bond Fund, UTI Dynamic Bond Fund and UTI Banking and

PSU Debt Fund, respectively. The exposure to the IL&FS SPV was marked down by 25% in January 2019 and further to 50% in April 2019. The ratings continue to be on rating Watch with Negative Implications as a decline in the AUM could result in a further increase in JSEL's share in the overall AUM, which can result in a further rating downgrade. ICRA will continue to monitor the portfolios of these schemes regularly and take appropriate rating action as and when required.

The ratings indicate ICRA's opinion on the credit quality of the portfolios held by the funds. The ratings do not indicate the AMC's willingness, or ability, to make timely payments to the fund's investors. The ratings should not be construed as an indication of expected returns, prospective performance of the mutual fund scheme, NAV or of volatility in its returns.

ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of 'credit scores'. These scores are based on ICRA's estimates of the credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories and maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

Rating sensitivities

Positive triggers – ICRA could upgrade the ratings of the schemes if the credit quality of the underlying investment improves or the size of the AUM increases significantly, resulting in a decrease in the share of lower rated investments and leading to the enhanced credit quality of the portfolio.

Negative triggers – ICRA could downgrade the ratings of the schemes if the credit quality of the underlying investment deteriorates or the size of the AUM declines, which may result in an increase in the share of lower rated investments and lead to a breach in the threshold for the rating level.

[1]**Negative triggers (for capital protection oriented schemes)** - ICRA could downgrade the rating of the capital protection oriented schemes if the maturity value of the debt holdings of the scheme and the current assets is lower than the amount mobilised from the investors or the underlying investments comprise of debt instruments rated below highest rating level on sustained basis.

UTI Capital Protection Oriented Scheme Series IX - (Plans 1, 2 & 3) and Series X - Plan 2
Plan 1 of UTI Capital Protection Oriented Scheme Series IX was launched in April 2017, Plan 2 was launched in June 2017 and Plan 3 was launched in August 2017. Plan 2 of UTI Capital Protection Oriented Scheme Series X was launched in April 2018.

The portfolio structure of the capital protection schemes has been designed with the intention of protecting the unitholder's capital at maturity, which is achieved by investing the majority of the funds in debt securities maturing on or before the maturity of the scheme. The schemes will invest in debt securities with the highest credit rating, mitigating any concerns on credit risk. The proportion of debt securities is calculated so that the redemption value of the debt less the AMC expenses will be equal to or more than the unitholder's initial capital, thereby offering the highest degree of protection to the unitholder's capital at maturity. ICRA has factored in the credit risk of debt investments, reinvestment risk of interim receipts, precondition of marginal tenure mismatches and obligor concentrations. The debt portion would be passively managed. The balance portion is invested in equity and/or equity-linked instruments to provide upside potential to the unitholders. At the same time, given the proportion of high credit quality debt investments and the portfolio structure, the downside is protected, and the investor may not suffer a loss of the initial investment at the time of maturity.
