Total	225.00	225.00	

*Instrument details are provided in Annexure-1

Rationale

The reaffirmation of the long-term rating continues to positively factor in the established presence and track record of LEA Associates South Asia Private Limited (LASA) in providing consultancy services across diverse sectors and its strong client profile. Its established track record enables the company to receive repeat orders from its major customers. The ratings further derive comfort from the company's healthy order book position and an order book/operating income of 3.2 times as on November 30, 2022, aided by steady order intake in the last few years. Hence, the revenue visibility is expected to remain healthy in the medium term. However, the timely execution of the projects remains crucial.

The company's surplus cash balances have improved with steady execution and limited capex/repayment obligations. The company had free cash balances of Rs. 140 crore and the fund-based limits of Rs. 37 crore remained unutilised as on March 31, 2022. The working capital intensity of the company is supported by advances from customers as well as back-to-back payment terms with sub-consultants.

Majority of LASA's revenues are from India, but for its overseas projects, the company's profitability remains exposed to foreign currency fluctuation risk in the absence of a hedging policy. ICRA also notes the employee-intensive nature of the consulting business, the high cost per employee and the challenges of retaining key personnel.

The ratings are also constrained by LASA's potential susceptibility to delayed payments as majority of the receivables pertains to Government clients where there have been delays in recovery of dues. This may impact the company's ability to make timely payments to its sub-consultants due to the back-to-back nature of the contracts. However, this is mitigated by the sizeable free cash balances at the company's disposal which can be utilised to make payments to the sub-consultants, especially since the company does not intend to pay any dividend at this stage. ICRA also notes that with the exception of a few projects, LASA's debtor realisation has been relatively healthy.

The Stable outlook assigned to the company reflects ICRA's expectation that LASA would continue to maintain its credit profile, driven by healthy order inflow and execution, resulting in improved profit margins and a strong liquidity position.

Key rating drivers and their description

Credit strengths

Established track record in consulting business with diversified service profile – LASA has a diversified service profile, offering services in various disciplines such as roads and highways, railways, urban development, traffic and transportation and water resources. It has an experience of more than 29 years in providing engineering and project consultancy services across various project stages - from feasibility studies and engineering designs to project management consulting. LASA's core competency

lies in the roads and highway segment, which includes both supervision and highway-DPR, resulting in healthy order book generation. The company's established track record enables it to receive repeat orders from its major clients such as NHAI. The diversified portfolio protects it from cyclical downturns in a specific industry to some extent.

Healthy order book position provides medium-term revenue visibility – The company has a healthy order book position and an order book/operating income of 3.2 times as on November 30, 2022, aided by steady order intake in the last few years. Hence, the revenue visibility is expected to remain healthy in the medium term.

Strong client profile ensures low counterparty credit risks – LASA's customer profile includes major Government authorities, including NHAI, RVNL, etc. The company also participates and executes contracts in the overseas market such as Ethiopia, Rwanda, Kenya, Uganda, Mozambique, Tanzania, Malawi, Zambia, Lao PDR, Bangladesh and Oman, which are primarily funded by multilateral agencies such as the World Bank and the African Development Bank. Hence, the credit risk in the overseas projects remains low.

Healthy financial profile – The financial risk profile of LASA is comfortable, reflected in the controlled debt levels with strong leverage indicators and TOL/ TNW of 0.9 times as on March 31, 2022. The company has limited long-term debt and limited utilisation of fund-based working capital facilities. Further, the coverage indicators remain comfortable with interest cover of 6.7 times and TD/OPBDITA of 0.1 times in FY2022. The company's strong liquidity position is evident from its healthy unencumbered cash and bank balances of Rs. 140 crore as on March 31, 2022.

Credit challenges

Competitive pressure from established local, multinational and boutique firms – The company faces competition from several large consulting companies, including Consulting Engineering Services (CES), RITES Limited, Louis Berger, Aarvee Associates Engineers & Consultants Private Limited, Renarde, Intercontinental Consultants and Technocrats (ICT). However, LASA's high technical expertise and its strong track record of operations have supported its revenue growth over the years. However, its operating margins have been moderate at around 8% in the last three years.

Employee-intensive nature of consulting business – Employee retention remains crucial, given the high costs associated with training its employees for the execution of projects. The company's ability to retain critical talent remains crucial for maintaining its competitive position as most of the projects are awarded on the basis of the technical expertise of the key personnel and its past track record.

Exposed to forex risks – The lack of hedging mechanisms for overseas operations exposes the company to unfavourable foreign exchange movements. The risk, however, is partially mitigated as majority of the revenue is contributed by the domestic market.

Susceptible to delayed receipt of payments from clients – LASA is susceptible to delayed payments as majority of the receivables pertains to Government clients where recovery is delayed owing to some issues. However, the company's debtors exceeding six months have reduced over the past few months owing to improved realisation. ICRA also notes that with exception of a few projects, LASA's debtor realisation has been relatively healthy.

Liquidity position: Strong

The company's liquidity position is strong with minimal utilisation of fund-based limits. Also, the company's non-fund based utilisation remains modest, averaging at ~50% during the period August 2021 to November 2022 with no past instances of BG invocation. Further, LASA had free cash of Rs. 140 crore as on March 31, 2022 with limited capital expenditure and nil repayment obligations. The company has historically met its working capital requirements through internal accruals, while remaining in a cash-surplus position.

Rating sensitivities

Positive factors – The ratings could be upgraded if there is a healthy accretion to fresh orders across segments and geographies on a sustained basis, supported by strong order execution and improving operating profitability. Further, improvement in the collection cycle could lead to an upgrade.

Negative factors – Pressure on the ratings could emerge if there is any significant decline in the company's revenues and profitability. Further, any elongation in the debtor cycle and/or any substantial write-off of debtors, stretching the company's liquidity position, may result in a downgrade. The ratings could also be downgraded if the interest coverage falls below 5.0 times on a sustained basis.

Complexity level of the rated instruments

Instrument	Complexity Indicator
Fund-based: Working capital facilities	Simple
Non-fund based facilities – Bank guarantee	Very Simple
Unallocated	NA

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
