Clix Capital Services Private Limited: Rating confirmed as final for PTCs backed by merchant loan receivables

Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
Nimbus 2022 ML Corbyn	Series A PTC	18.38	[ICRA]AA(SO); provisional rating confirmed as final

*Instrument details are provided in Annexure I

Rationale

In December 2022, ICRA had assigned a Provisional [ICRA]AA(SO) rating to Series A PTC issued by Nimbus 2022 ML Corbyn Trust. The pass-through certificates (PTCs) are backed by a pool of Rs. 20.42-crore (pool principal; receivables outstanding of Rs. 24.34 crore) merchant loan receivables originated by Clix Capital Services Private Limited (Clix/originator). Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating has now been confirmed as final.

A summary of the pool's performance as on February 2023 payouts is shown in the table below.

Parameter	Nimbus 2022 ML Corbyn
Months post securitisation	3
Pool amortisation	49.97%
Series A1 PTC Amortisation	55.52%
Cumulative prepayment rate %	30.51%
Cumulative collection efficiency	98.00%
Loss cum 0+ dpd	6.20%
Loss cum 30+ dpd	0.00%
Loss cum 90+ dpd	0.00%
Cumulative cash collateral (CC) utilisation	0.00%

Key rating drivers

Credit strengths

- Availability of credit enhancement (CE) in the form of over-collateralisation (OC), excess interest spread (EIS) and CC
- Absence of overdue contracts as on cut-off date
- All contracts in the pool have a bureau score of 700 and above at the time of onboarding

Credit challenges

- High delinquencies seen in the portfolio in the past; limited vintages, post underwriting revision undertaken after Covid-19 pandemic
- Exposed to inherent credit risk associated with the unsecured nature of the asset class; pool's performance could remain exposed to macro-economic shocks/business disruptions

Description of key rating drivers highlighted above

As per the transaction structure, the monthly cash flow schedule comprises the promised interest payments to Series A PTCs at the predetermined interest rate on the principal outstanding. The principal repayment to Series A PTCs is promised on the last payout date (June 2024). The collections from the pool, after making the promised interest payouts to Series A PTCs, will

be used to make the expected principal payouts to Series A PTCs, though this is not promised and any shortfall in making the same would be carried forward to the subsequent payout. Any surplus EIS after meeting the promised payouts would flow back to the originator. Also, in the event of a shortfall in meeting the promised PTC payouts during any month, the Trustee will utilise the CC to meet the same. Further, in case of excess collections in a month – after meeting the promised PTC payouts – the same would first be used to top up the CC to the extent of past utilisation.

The first line of support for Series A PTCs in the transaction is in the form of OC of 10.0% of the pool principal. The EIS (14.92% of initial pool principal) available in the structure and a CC of 10.0% of the initial pool principal (i.e. Rs. 2.04 crore) provided by Clix act as further CE in the transaction.

The current pool consists of receivables from Clix's MLs under its lending programme with the partner. There were no overdues in the pool as on the cut-off date. The pool has low obligor concentration with the top 10 borrowers having a share of 2.10%. The contracts in the pool have low seasoning with a weighted average seasoning of 4.3 months. The company had reported high delinquencies for this asset class during the early stages of the product, though there was an improvement in the second half of the previous fiscal under the tighter lending regime. The asset quality, however, remains moderate while the portfolio seasoning remains limited. Also, the performance of the pool would remain exposed to the inherent credit risks associated with the unsecured nature of the asset class.

Past rated pools' performance: ICRA has rated 11 PTC transactions of Clix's ML portfolio of which one has matured. The performance of the pools has been satisfactory with a cumulative collection efficiency of ~96% and above with nil CC utilisation and low (sub 1.5%) 90+ days past due (dpd).

Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The mean and the coefficient of variation (CoV) are calibrated based on the values observed in the analysis of the past performance of Clix's ML portfolio. ICRA has also considered the credit quality experience of Clix and ICRA's expectation of the credit quality for ML portfolios. Overall, Clix's ML target borrower segment could be financially vulnerable as well as subject to various seasonality factors.

The resulting collections from the pool – after incorporating the impact of losses and prepayments – are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction. Various possible scenarios are simulated and the incidences of default to the investor as well as the extent of losses are measured. These are then compared with ICRA's internal benchmarks for the target rating. For the transaction, after adjusting for key features like seasoning and risk decile separately in the pool, ICRA estimates the shortfall in the pool principal collection within the pool's tenure at 4.75-5.75%, with certain variability around it. The prepayment rate for the underlying pool is estimated at 1.5-4.5% per annum.

Liquidity position: Strong

As per the transaction structure, only the interest amount is promised to the Series A PTC holders on a monthly basis while the principal amount is promised on the scheduled maturity date of the transaction. The cash flows from the pool and the available CE are expected to be comfortable to meet the promised payouts to the Series A PTC investors.

Rating sensitivities

Positive factors – The rating could be upgraded based on the sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and on an increase in the cover available for future PTC payouts from the CE.

Negative factors – The rating could be downgraded on the sustained weak collection performance of the underlying pool (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and CE utilisation levels.

Analytical approach

The rating action is based on the Trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA

About the company

Clix Capital Services Private Limited (Clix) is a non-banking financial company (NBFC) registered with the Reserve Bank of India (RBI). It provides retail financing products (personal loans, business loans, micro, small and medium enterprise (MSME), housing finance, etc). The company, which was incorporated as GE Money Financial Services Pvt Ltd (GE Money) in 1994, formed the non-banking business of the General Electric (GE) Group along with its Group company – GE Capital Services India (GE Capital). In September 2016, this business was acquired by a consortium, comprising AION Capital Partners, Mr. Pramod Bhasin and Mr. Anil Chawla, and rebranded as Clix¹. In April 2022, Clix Finance India Private Limited (CFIPL; erstwhile GE Capital) was merged with Clix. Following the merger, Clix's portfolio comprises MSME and consumer lending along with healthcare and equipment finance and digital lending (onboarded from CFIPL). Additionally, Clix Housing Finance Private Limited, a wholly-owned subsidiary of Clix, primarily provides housing/mortgage finance products.

Complexity level of the rated instrument

Instrument	Complexity Indicator
Series A PTC	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
