Clix Capital Services Private Limited: Rating confirmed as final for PTCs backed by backed by personal loan and business loan receivables issued by Murakami 2023

Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
Murakami 2023	Series A1(a)	23.68	[ICRA]AA+(SO); provisional rating finalised
	Series A1(b)	2.63	[ICRA]A+(SO); provisional rating finalised

*Instrument details are provided in Annexure I

Rationale

In May 2023, ICRA had assigned ratings Provisional [ICRA]AA+(SO) to the Series A1(a) pass-through certificate (PTC) and Provisional [ICRA]A+(SO) to the Series A1(b) PTC issued by Murakami 2023 Trust. The pass-through certificates (PTCs) are backed by a pool of Rs. 29.24-crore (pool principal; receivables outstanding of Rs. 36.95 crore) originated by Clix Capital Services Private Limited (Clix/originator). Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating has now been confirmed as final.

A summary of the pool's performance as on August 2023 payouts is shown in the table below.

Parameter	Murakami 2023
Months post securitisation	3
Pool amortisation	23.62%
PTC Amortisation Series A1(a)	29.16%
PTC Amortisation Series A1(b)	0.00%
Cumulative collection efficiency (including advance collections)	98.55%
Monthly Collection (Normal Coll + OD Coll)	97.52%
Loss-cum-0+ dpd	3.07%
Loss cum 30+ dpd	0.69%
Loss cum 90+ dpd	0.00%
Cumulative Prepayment rate	14.13%
Cumulative cash collateral (CC) utilisation	0.00%

Key rating drivers

Credit strengths

- Availability of CE in the form of EIS, subordination and CC
- Pool consists of nil overdue contracts; ~99% of the contracts have never been delinquent since origination as on the cut-off date
- Pool has weighted average seasoning of ~8 months with pre-securitisation amortisation of ~15%

Credit challenges

- Moderately high geographical concentration in the initial pool with top 3 states accounting for ~57% of the initial pool principal
- Exposed to inherent credit risk associated with the unsecured nature of the asset class; pool's performance could also be affected by macro-economic shocks/business disruptions

Description of key rating drivers highlighted above

The first line of support for PTC Series A1(a) in the transaction is in the form of a subordination of 19.00% of the pool principal {includes principal payable to PTC Series A1(b)}. After PTC Series A1(a) has been fully paid, subordination of 10.00% of the pool principal (includes equity tranche/OC) will be available for PTC Series A1(b). Further credit support is available in the form of an EIS of 15.82% for both series of PTCs. A CC of 5.00% of the initial pool principal, to be provided by Clix, would act as further CE in the transaction. In the event of a shortfall in meeting the promised PTC payouts during any month, the Trustee will utilise the CC to meet the same.

As per the transaction structure, the equity tranche PTC payouts are completely subordinated to the PTC Series A1 payouts. Till May 17, 2025, the collections from the pool will be used for making the promised interest payouts to PTC Series A1(a) and A1(b) on a pari passu basis. After making the promised interest payouts to PTC Series A1(a) and A1(b), collections will be used to make the expected principal payouts to PTC Series A1(a) till its redemption followed by the expected principal payout to PTC Series A1(b). The entire principal repayment to PTC Series A1(a) and A1(b) is promised on the scheduled maturity date of the respective tranches. From May 18, 2025 till the final maturity date, the collections from the pool will be used for making the promised interest payouts to PTC Series A1(a) and A1(b) on a pari passu basis. After this, collections will be utilised for the redemption of PTC Series A1(a) and A1(b) on a pari passu basis. The EIS available after meeting the expected and promised PTC payments will flow back to the originator on a monthly basis. All prepayment amounts would be passed on to PTC Series A1(a) till May 17, 2025. From May 18, 2025, the prepayment amounts would be passed on to PTC Series A1(a) and A1(b) on a pari passu basis for the respective amounts outstanding till complete redemption.

There were no overdues in the pool as on the cut-off date. The pool has a weighted average seasoning of ~8 months. It has moderately high geographical concentration with the top 3 states (Maharashtra, Tamil Nadu and Karnataka) accounting for ~57% of the pool's principal. The company had witnessed a moderation in the asset quality at the portfolio level, post the onset of the Covid-19 pandemic, resulting in a build-up of delinquencies. ICRA notes that a large part of the portfolio stress in the PL and BL segment has emanated from the old and/or restructured book. Furthermore, the recent originations (post August 2020) have demonstrated a healthy performance, but with a limited track record. The pool's performance will remain exposed to the inherent credit risk associated with the unsecured nature of the asset class. Macro-economic shocks/business disruptions could have a further bearing on the performance.

Past rated pools' performance: ICRA has, so far, rated 25 PL pools originated by Clix, of which 19 were live as of the August 2023 payout month. Though collections were impacted for a few months due to the pandemic, live pools, which have completed at least 3 payouts as of the August 2023 payout date, have reported a healthy cumulative collection efficiency of more than 90%. There has not been any CC utilisation in any of the transactions till date and the CE has built up in all the live pools.

Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The mean and the coefficient of variation (CoV) are calibrated on the basis of the values observed in the analysis of the past performance of Clix's loan portfolio. Given the short track record of Clix in the PL business, ICRA has also considered the credit quality experience of other more established players and ICRA's expectation of the credit quality of PLs. Clix's target borrower segment could be financially vulnerable as well as subject to various seasonality factors. Though the company resorts to legal recourse for some of the delinquent loans, this may not always be a feasible option particularly given the small ticket size and the unsecured nature of the loans issued.

The resulting collections from the pool – after incorporating the impact of losses and prepayments as above – are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction. Various possible scenarios are simulated and the incidences of default to the investor as well as the extent of losses are measured. These are then compared with ICRA's internal benchmarks for the target rating.

For the current pool, after considering the above-mentioned factors regarding the asset class and after adjusting for key features like seasoning, overdues, ticket size, interest rate, bureau score, and geographical distribution, ICRA estimates the shortfall in the pool principal collection within the pool's tenure at 5.0-6.0%, with certain variability around it. The prepayment rate in the pool is estimated at 3.2-12.0% p.a. with a mean of 8.00%.

Liquidity position: Strong

As per the transaction structure, only the interest amount is promised on a pari-passu basis to both tranches of PTC holders on a monthly basis while the principal amount is promised on the scheduled maturity date of the transaction. The cash flows from the pool and the available CE are expected to be comfortable to meet the promised payouts to both tranches of PTC investors.

Rating sensitivities

Positive factors – The ratings could be upgraded based on the sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and on an increase in the cover available for future PTC payouts from the CE.

Negative factors – The ratings could be downgraded based on the sustained weak collection performance of the underlying pool (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and CE utilisation levels.

Analytical approach

The rating action is based on the Trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA

About the company

Clix Capital Services Private Limited (Clix) is a non-banking financial company (NBFC) registered with the Reserve Bank of India (RBI). It provides retail financing products (personal loans, business loans, micro, small and medium enterprise (MSME), etc). The company, which was incorporated as GE Money Financial Services Pvt Ltd in 1994, formed the non-banking business of the General Electric (GE) Group along with its Group company – GE Capital Services India (GE Capital). In September 2016, this business was acquired by a consortium, comprising AION Capital Partners, Mr. Pramod Bhasin and Mr. Anil Chawla, and rebranded as Clix¹. In April 2022, Clix Finance India Private Limited (CFIPL; erstwhile GE Capital) was merged with Clix. Following the merger, Clix's portfolio comprises MSME and consumer lending along with healthcare and equipment finance and digital lending (onboarded from CFIPL). Additionally, Clix Housing Finance Private Limited, a wholly-owned subsidiary of Clix, primarily provides housing/mortgage finance products.

Complexity level of the rated instrument

Instrument	Complexity Indicator
Series A1(a)	Moderately Complex
Series A1(b)	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
