Sundaram Finance Limited: Rating confirmed as final for PTCs backed by pool of commercial vehicle, construction equipment and machinery loan receivables issued by Shri Trust AU 2024

Summary of rating action

Trust Name	Instrument Type*	Rated Amount (Rs. crore)	Rating Action
Shri Trust AU 2024	PTC Series A	176.83	[ICRA]AAA(SO); provisional rating confirmed as final

*Instrument details are provided in Annexure I

Rationale

In December 2023, ICRA had assigned a Provisional [ICRA]AAA(SO) rating to PTC Series A issued by Shri Trust AU 2024. The pass-through certificates (PTCs) are backed by loan receivables of a Rs. 176.83-crore (pool principal; receivables of Rs. 207.71 crore) of new commercial vehicle (CV), used CV, construction equipment and machinery loan contracts originated by Sundaram Finance Limited (rated [ICRA]AAA(Stable); [ICRA]A1+). Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating have now been confirmed as final.

A summary of the pool performance after the January 2024 payouts is provided in the table below:

Parameter	Shri Trust AU 2024
Month Post securitisation	1
Pool Amortisation	3.0%
PTC Series A amortisation	2.50%
Monthly collection efficiency	98.1%
Cumulative collection efficiency	95.0%
Loss cum 0+ DPD	4.1%
Loss cum 30+ DPD	1.6%
Loss cum 90+ DPD	0.0%
Cumulative Prepayment	0.4%
CC Utilisation %	0.0%

Key rating drivers

Credit strengths

- Presence in diverse segments with established track record in lending and financial services business
- Availability of CE in the form of EIS and CC
- Average seasoning of ~10 months as on the pool cut-off date
- No overdue contracts in the pool as on the cut-off date

Credit challenges

- Performance of the pool would remain exposed to macro-economic shocks/business disruptions

Description of key rating drivers highlighted above

As per the transaction structure, the monthly cash flow schedule will comprise the promised interest payments to PTC Series A at the predetermined interest rate on the principal outstanding and the entire principal on the final maturity date (June 25, 2028). During the tenure of PTC Series A, the collections from the pool, after making the promised interest payouts to PTC Series A, will be used to make the expected principal payouts (to the extent of pool principal billing) to PTC Series A. However, this principal payout is not promised and any shortfall in making the expected principal payment to PTC Series A would be carried forward to the subsequent payout.

The loan pool receivables will be assigned at par to the PTC investors. The first line of support for meeting any shortfall in the scheduled PTC payouts is available in the form of a scheduled EIS of 4.12% in the structure. Further credit support is available in the form of a CC of 8.00% of the initial pool principal provided by SFL in the transaction. The CC is in the form of a fixed deposit maintained with a bank. In the event of a shortfall in meeting the promised PTC payouts during any month, the trustee will utilise the CC to meet the same.

The selected pool consisted of receivables against loans given for financing new CVs (68.0% share in the pool by value), used CVs (10.0%), construction equipment (21.0%) and machinery (2.0%) as on cut off date. The pool had an average seasoning of ~10 months as on the cut-off date. There were no overdue contracts in the pool as on the cut-off date. None of the contracts had ever been delinquent in the past. The performance of the pool would remain exposed to macro-economic shocks/business disruptions.

Performance of past rated pools: ICRA has rated 67 securitisation transactions with the underlying receivables originated by SFL. The performance of the live pools (which have completed atleast 3 payouts) has been healthy with a cumulative collection efficiency of more than 98% and no CC utilisation as of the November 2023 payout month.

Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential delinquencies, losses (shortfall in principal collection during the balance tenor of the pool) and prepayments in the pool. The assumptions for the loss and coefficient of variation (CoV) are arrived at after taking into account the past performance of the originator's portfolio and the rated pools as well as the performance and characteristics of the specific pool being evaluated. Additionally, the assumptions may be adjusted to factor in the current operating environment and any industry-specific factors that ICRA believes could impact the performance of the underlying pool of contracts.

After making these adjustments, the expected mean shortfall in principal collection during the tenure of the pool is estimated at 2.15-3.15%, with certain variability around it. The prepayment rate for the underlying pool is estimated in the range of 4.8-18.0% per annum with average prepayment of 12.0%.

Liquidity position: Strong

The liquidity for PTC Series A is strong after factoring in the credit enhancement available to meet the promised payout to the investor. The total credit enhancement would be ~4 times the estimated loss in the pool.

Rating sensitivities

Positive factors – Not applicable

Negative factors – Pressure on the rating could emerge on the sustained weak collection performance of the underlying pool (monthly collection efficiency of <90%), leading to higher-than-expected delinquency levels and CE utilisation levels. A weakening in the credit profile of the servicer could also exert pressure on the rating.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Analytical Approach

Complexity level of the rated instrument

Instrument	Complexity Indicator
PTC Series A	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
