Total	6,490.00	10,940.00				
Issuer rating	-	-	[ICRA]AAA (Stable); reaffirmed			

*Instrument details are provided in Annexure I

Rationale

The rating action for IndiGrid Infrastructure Trust (IndiGrid/the Trust) favourably reflects the stable revenue profile of the Trust, driven by a healthy operating performance of its transmission and solar power assets. The average line availability for the transmission assets has remained above the normative level of 98% stipulated in the transmission service agreement (TSA) since commissioning, while the generation performance of the solar assets has been satisfactory.

The ratings further favourably factor in the low counterparty credit risk due to the significant diversification and a strong payment security mechanism for the underlying inter-state power transmission assets of IndiGrid. The Central Transmission Utility (CTU) is responsible for collecting the transmission charges from the beneficiary users and disbursing them to the inter-state transmission licensees. The CTU's function has been carved out from the Power Grid Corporation of India Limited (PGCIL) to its 100% subsidiary, Central Transmission Utility of India Limited. The collection efficiency has remained above 95% over the years. In the case of solar assets, comfort is drawn from the presence of strong counterparties, such as Solar Energy Corporation of India Limited (SECI; rated [ICRA]AAA (Stable)/[ICRA]A1+), NTPC Vidyut Vyapar Nigam Limited (NVVN) and Gujarat Urja Vikas Nigam Limited (GUVNL; [ICRA]AA- (Stable)/[ICRA]A1+), for ~79% of the capacity.

The ratings are supported by the healthy financial risk profile of the Trust, evident from the strong debt coverage indicators. Further, the ratings draw comfort from the structural features of the debt programme of IndiGrid, including a debt service reserve account (DSRA) equivalent to one quarter of debt servicing, cash trap triggers in case the debt service coverage ratio falls below 1.11x and a structured payment mechanism designed to ensure a timely payment of the rated NCDs, as per the terms of the transaction. Also, if the rating of the NCDs falls to or below AA-, the debenture holders are entitled to ask the issuer for the redemption of NCDs within 30 days.

The Trust's asset under management (AUM) stood at Rs. 29,387 crore as on December 31, 2024, consisting of 18 operational transmission projects, including one captive asset and three under-construction transmission projects, comprising 49

transmission lines of ~8,700 cKM and 15 sub-stations of 22,550 MVA across 20 states and two Union Territory (UT). Further, the AUM consists of operational solar power assets of 855 MWac (1097 MWdc). The share of the solar assets in the overall AUM stands at ~21%.

The under-construction projects include Ishanagar Power Transmission Limited (IPTL), Dhule Power Transmission Limited (DPTL) and Kallam Transco Limited (KTCO) and three under-construction battery storage projects under Kilokari BESS Private Limited (KBPL with 20 MW/40 MWh contracted capacity), Gujarat BESS Private Limited (GBPL with 180 MW/360 MWh contracted capacity) and Rajasthan BESS Private Limited (RBPL with 250 MW/500 MWh contracted capacity). Further, the Trust has recently received a letter of intent (LoI) from REC Power Development and Consultancy Limited to establish an inter-state transmission system (ISTS) for the evacuation of power from Ratle HEP (850 MW) and Kiru HEP (624 MW) on a build, own, operate and transfer (BOOT) basis.

IndiGrid's net debt/AUM was at ~59% as on February 28, 2025 against the 70% leverage threshold, as per the SEBI investment trust (InvIT) Regulations. However, the net debt/AUM is expected to go up over the next three years, given the expected increase in debt for funding the under-construction portfolio. Also, the proceeds from the proposed NCD of Rs. 4,200 crore will be utilised to refinance the existing debt and acquire transmission and solar assets. ICRA expects the net debt/AUM ratio of the Trust to be maintained at around 65% or below on a sustained basis and this remains a key credit monitorable.

While a rise in the share of solar assets increases the revenue variability risk for the Trust, comfort can be drawn from the satisfactory generation performance of the solar assets, the availability of long-term PPAs for the solar portfolio and the presence of strong counterparties for a majority of the portfolio. The share of non-transmission assets is expected to remain below 25% in the Trust's AUM, going forward.

For the three under-construction greenfield transmission projects - IPTL, DPTL and KTCO - the Trust has partnered British International Investment (BII), the UK's development finance institution, the Norwegian Climate Investment Fund managed by Norfund, and Techno Electric and Engineering Company Limited (Techno) (Techno for IPTL and DPTL only). Under this partnership, Norfund and BII will invest in these three projects. Additionally, Techno will co-develop the IPTL and DPTL projects by investing minority capital and will be responsible for the complete execution of the projects on a lumpsum turnkey (LSTK) basis. IndiGrid will only invest a portion of the total project cost during the construction phase and the balance will be funded by the other partners. Once the projects are operational, IndiGrid will pay off the incurred cost of these projects, thereby providing an exit to these investors, as per the terms of the agreement. This will allow IndiGrid to defer the debt on its books during the project execution period as well as shield itself from project execution risks, given the terms with the contractor.

For the under-construction battery projects, battery energy storage purchase agreements have been signed with NVVN for RBPL, Gujarat Urja Vikas Nigam Limited (GUVNL) for GBPL and with BSES Rajdhani Power Limited for KBPL. The purchase tenure for the battery projects is 12 years at fixed tariff charges.

Further, ICRA notes the Trust's partnership with BII and Norfund for the creation of platform, EnerGrid, which will bid and develop greenfield transmission and standalone battery energy storage system (BESS) projects in India. Each of the three partners have committed to invest \$100 million in the platform. IndiGrid will only invest a portion of the promoter contribution requirement during the construction phase and the balance will be funded by the other partners in this platform. These projects will be acquired by IndiGrid at a pre-agreed enterprise value post commencement of the operations.

The total capex for the under-construction/Lol projects and capacity augmentation at a few of the existing transmission assets is estimated at ~Rs. 4,700 crore. However, the execution risks for the under-construction transmission assets remain limited due to IndiGrid's partnership with BII and Norfund, wherein these projects will be fully acquired by IndiGrid at a pre-agreed enterprise value post commencement of operations. However, the presence of the other under-construction projects in the portfolio exposes the Trust to execution risks. Hence, the share of the solar and under-construction assets and the fundamental quality of such assets in IndiGrid's portfolio will remain a key rating sensitivity. Also, the capex would increase the leveraging level and is expected to moderate the debt coverage metrics of the Trust. Nonetheless, the Trust is expected to maintain comfortable debt coverage metrics.

ICRA also takes note of the refinancing risk for the various debt programmes of the Trust and its subsidiaries. While this exposes the Trust to refinancing risk, the high certainty of cash flows for inter-state power transmission projects, a high residual TSA tenure of ~28 years for transmission assets, an average residual PPA tenure of ~19 years for solar assets and the presence of amortising loans in IndiGrid's overall debt mix act as the strong risk mitigating factors. Nonetheless, ICRA will continue to monitor the Trust's ability to ensure timely refinancing of the maturing debt facilities. Also, the Trust remains exposed to interest rate risk.

Additionally, any lapse in operation and maintenance (O&M) may impact the line availability performance of the transmission assets and the generation of solar assets. Also, variability in O&M expenses might impact the profitability of the transmission and solar assets. However, the experience of the Trust's project manager should ensure adequate resource allocation and cost-efficient execution of O&M activity.

Esoteric II Pte. Ltd (Esoteric), the sponsor of IndiGrid and an affiliate of KKR, holds a 1.2% stake in IndiGrid as of December 31, 2024, compared to a 21.17% stake in IndiGrid as on June 30, 2024. However, KKR continues to be the sponsor of IndiGrid and owns 100% of IndiGrid Investment Managers Limited – which remains IndiGrid's investment manager. ICRA notes that the reduced stake of Esoteric will not have any material impact on the credit profile of the Trust. IndiGrid's shareholding remains diversified, with the presence of large foreign portfolio investors, mutual funds, pension funds, insurance companies, non-institutional and retail investors.

The Stable outlook assigned by ICRA factors in the stability in IndiGrid's cash flows, supported by the availability-linked payments, a strong payment security mechanism for the inter-state transmission assets and a healthy operating performance of the transmission and solar power portfolio.

Key rating drivers and their description

Credit strengths

Availability-linked payments under long-term TSAs for transmission assets and long-term PPAs for solar assets - All the transmission SPVs under IndiGrid have low revenue risk, with availability-linked payments under the TSAs signed with the customers. Also, the tariff agreed in the TSAs remains fixed, except for one asset, which has a regulated cost-plus tariff. The average residual tenure of the TSAs for the SPVs is ~28 years, except for ENICL and JKTPL, where it is 10-11 years, with a provision for further extension. Further, the 855-MW (AC) solar capacity has long-term PPAs with the SECI, NVVN and the discoms of Gujarat, Tamil Nadu, Uttar Pradesh, Madhya Pradesh and Punjab, with a weighted average residual tenure of ~19 years.

Stable performance of assets under IndiGrid - The line availability for the operational transmission assets remains healthy at more than the normative level of 98%. However, the line availability remained below the normative level for two assets (Jhajjar KT Transco Private Limited and Gurgaon Palwal Transmission Limited) in Q3 FY2025 due to transformer/bus reactor breakdown. The company has filed an insurance claim for the loss of revenue and additional capital expenditure required for the replacement of the breakdown parts. Also, the company is taking various steps to avoid such problems in the future. The generation performance for the 855-MW (AC) solar assets has remained largely in line with the P-90 estimate. A stable operating performance translates into healthy cash flow in the form of monthly tariffs and incentives for the transmission assets.

Strong payment security for inter-state transmission assets; strong counterparty for majority of the solar portfolio - All the transmission projects (except JKTPL) are part of the inter-state transmission grid, which enjoys strong payment security; the Central Transmission Utility of India Limited (CTU) is responsible for raising bills and collecting payments from the transmission system consumers. Also, the collection track record of JKTPL from the Haryana discoms remains satisfactory. For the 855-MW (AC) solar assets, comfort can be derived from the presence of strong counterparties like SECI/NVVN/GUVNL as the offtakers

have a track record of timely payments for ~79% of the DC solar capacity. The balance solar capacity is tied up with the state discoms of Tamil Nadu, Punjab, Madhya Pradesh and Uttar Pradesh having modest financial profiles.

Healthy debt coverage metrics – IndiGrid's financial risk profile remains healthy, evident from its comfortable debt service coverage metrics. After raising ~Rs. 695 crore through the preferential issue of shares in October 2024, IndiGrid's net debt/AUM was ~59% as on February 28, 2025. However, the net debt/AUM is expected to go up over the next three years, given the expected increase in debt for funding the under-construction portfolio. Also, the proceeds from the proposed NCD of Rs. 4,200 crore will be utilised to refinance the existing debt and acquire transmission and solar assets. ICRA expects the net debt/AUM ratio of the Trust to be maintained at around 65% or below on a sustained basis and this will remain a key rating sensitivity.

Structural features such as DSRA, cash-trap triggers and payment mechanism – The debt raised by IndiGrid and its subsidiaries has structural features, such as DSRA (equivalent to one quarter debt servicing), cash-trap triggers and payment mechanism, which are designed to ensure timely payments to the lenders and debt holders.

Credit challenges

Moderate operations and maintenance (O&M) risk - As the cash flows from all the transmission and solar assets are closely linked to the line availability and generation performance, respectively, any lapse in O&M may impact the cash flows. However, the steady performance of all the commissioned projects and the adequate resources by virtue of the large power transmission asset portfolio mitigate the risk to a large extent.

Diversification into solar assets and under-construction projects increases revenue and execution risks - The presence of solar power assets (~21% of its AUM) has increased the revenue variability risk for the Trust as the revenues for such assets remain exposed to generation and in turn to weather conditions, module quality and O&M practices. Nonetheless, comfort can be drawn from the satisfactory track record demonstrated by this portfolio. Also, the exposure to the state discoms has increased the counterparty risk for IndiGrid. Herein comfort can be drawn from the improved payment discipline over the recent past, post the implementation of the late payment surcharge (LPS) rules and as they constitute a small share of the overall AUM. Further, the Trust has four¹ transmission projects and three battery storage projects under construction. The exposure of IndiGrid to risks associated with the under-construction transmission assets is expected to be mitigated by its partnership with BII and Norfund, as per which these projects will be fully acquired by IndiGrid at a pre-agreed enterprise value post the commencement of commercial operations. However, the presence of other under-construction projects in the portfolio exposes the Trust to execution risks. The exposure to the solar projects and under-construction projects and their impact on the Trust's operating profile, leverage and cash flows would remain a key monitorable, going forward.

Debt refinancing risk as most debt has bullet repayments; comfort derived from long tail period of TSAs and certainty of cash flows - As on February 28, 2025, IndiGrid's consolidated debt stood at Rs. 18, 789 crore, with majority of the debt having bullet repayments. However, the high certainty of cash flows in the power transmission projects, an adequate tail period, the long useful life of the assets and the presence of amortising loans in IndiGrid's overall debt mix act as the strong risk mitigating factors. Nonetheless, ICRA will continue to monitor the Trust's ability to ensure timely refinancing of the maturing debt facilities, going forward.

Liquidity position: Strong

The liquidity position of the Trust is expected to remain strong, supported by a healthy operating performance that ensures stable revenue generation, timely collection of transmission charges under the pooling mechanism of the CTU and the presence of strong counterparties for majority of the solar portfolio. In addition, the presence of a three-month DSRA for the

¹ Including inter-state transmission system for evacuation of power from Ratle HEP and Kiru HEP for which LoI has been received

debt facilities provides additional comfort. Also, the Trust has enabled a commercial paper programme of Rs. 500 crore as liquidity back-up, in case of any cash flow mismatch. As on February 28, 2025, the cash balance (including DSRA) of the Trust stood at ~Rs. 1,470 crore.

Rating sensitivities

Positive factors – Not applicable.

Negative factors – Negative triggers for the ratings assigned to IndiGrid would be lower-than-stipulated availability of transmission assets and/or under-performance in generation by the solar assets, adversely impacting the cash accruals and debt service coverage indicators. Further, any delay in collecting payments for the transmission or solar assets adversely impacting the liquidity profile of the Trust would be a negative trigger. Also, any material decline in the share of operational inter-state transmission assets in IndiGrid's AUM or any material delays in the commissioning of the under-construction projects could be a negative trigger for the ratings.

Environmental and Social Risks

The power transmission and generation assets of IndiGrid are exposed to the risk of natural disasters and extreme weather conditions, which could damage the power transmission lines or generation equipment. Further, some of the transmission projects could be exposed to some degree of bushfire risk as the network spans forest areas. If these risks materialise, IndiGrid would likely be able to recover the cost of replacing the damaged equipment through insurance coverage, and loss of revenues through the force majeure clause under the TSAs for the transmission assets. Also, the generation performance of the solar assets remains exposed to adverse weather events.

IndiGrid is exposed to social risks arising from the challenges related to land acquisition for the under-construction transmission projects. Also, the projects could face delays in receiving statutory approvals owing to concerns over their impact on the flora and fauna. Nonetheless, ICRA notes that the share of under-construction projects is low in IndiGrid's AUM.

Analytical approach

Analytical Approach	Comments
Applicable Rating Methodologies	<u>Corporate Credit Rating Methodology</u> <u>Rating Methodology - Infrastructure Investment Trusts (InvITs)</u> <u>Power Transmission</u> <u>Power - Solar</u>
Parent/Group Support	Not applicable
Consolidation/Standalone	ICRA has consolidated the business and financial risk profile of all the SPVs under IndiGrid as the cash flows are fungible among the various SPVs due to the direct control of IndiGrid. The regulatory debt cap of 70% on the consolidated asset valuation also supports the consolidation approach of the InvIT

InvIT Structure

SEBI had introduced infrastructure investment trust (InvIT) regulations for infrastructure projects, keeping in mind the huge infrastructure needs of India. InvIT is a mechanism that enables infrastructure developers to monetise their assets by pooling multiple assets under a single entity (which would be a Trust structure). The key features of InvITs are — mandatory distribution of 90% of the net distributable cash flows (NDCF) to the unit investors, leverage cap of 70% on the net asset value and a cap on exposure to under-construction assets for publicly-placed InvITs.

IndiGrid Infrastructure Trust Profile

IndiGrid Infrastructure Trust (formerly India Grid Trust) was set up on October 21, 2016, as an irrevocable Trust pursuant to the trust deed under the provisions of the Indian Trusts Act, 1882 and registered with the Securities and Exchange Board of India as an InvIT on November 28, 2016, under Regulation 3(1) of the InvIT Regulations.

The Trust has assets under management of Rs. 29,387 crore as on December 31, 2024, consisting of 18 diversified operational transmission projects and four under-construction transmission projects across 20 states and two UT. It also includes 855 MWac (1097 MWdc) operational solar power capacity and three under-construction battery storage projects. All the transmission projects have been implemented on a BOOM basis and have TSAs in place for 35² years, except for two assets. KKR is the sponsor of the Trust. Separately, KKR also owns a 100% stake in Indigrid Investment Managers Limited (IIML), the investment manager of IndiGrid. Axis Trustee Services Limited is the trustee for the Trust.

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: <u>Click Here</u>

About ICRA Limited:

ICRA Limited was set up in 1991 by leading financial/investment institutions, commercial banks and financial services companies as an independent and professional investment Information and Credit Rating Agency.

Today, ICRA and its subsidiaries together form the ICRA Group of Companies (Group ICRA). ICRA is a Public Limited Company, with its shares listed on the Bombay Stock Exchange and the National Stock Exchange. The international Credit Rating Agency Moody's Investors Service is ICRA's largest shareholder.

ICRA ratings should not be treated as recommendation to buy, sell or hold the rated debt instruments. ICRA ratings are subject to a process of surveillance, which may lead to revision in ratings. An ICRA rating is a symbolic indicator of ICRA's current opinion on the relative capability of the issuer concerned to timely service debts and obligations, with reference to the instrument rated. Please visit our website www.icra.in or contact any ICRA office for the latest information on ICRA ratings outstanding. All information contained herein has been obtained by ICRA from sources believed by it to be accurate and reliable, including the rated issuer. ICRA however has not conducted any audit of the rated issuer or of the information provided by it. While reasonable care has been taken to ensure that the information herein is true, such information is provided 'as is' without any warranty of any kind, and ICRA in particular, makes no representation or warranty, express or implied, as to the accuracy, timeliness or completeness of any such information. Also, ICRA or any of its group companies may have provided services other than rating to the issuer rated. All information contained herein must be construed solely as statements of opinion, and ICRA shall not be liable for any losses incurred by users from any use of this publication or its contents.
