APL Apollo Building Products Private Limited: Ratings reaffirmed

Summary of rating action

Instrument*	Previous rated amount (Rs. crore)	Current rated amount (Rs. crore)	Rating action
Commercial Paper	200.00	200.00	[ICRA]A1+; reaffirmed
Long term Fund-based: Term Loan	225.00	225.00	[ICRA]AA+ (Stable); reaffirmed
Long/short term Fund-based: Working Capital Facilities	160.00	160.00	[ICRA]AA+ (Stable)/ [ICRA]A1+; reaffirmed
Total	585.00	585.00	

*Instrument details are provided in Annexure I

Rationale

ICRA has taken a consolidated view of the business and financial risk profiles of APL Apollo Tubes Limited (AATL), its wholly-owned subsidiaries, including Apollo Metalex Private Limited (AMPL) and APL Apollo Building Products Private Limited (ABPPL) to arrive at the ratings. Collectively referred to as the Group/APL/company, these entities are in the similar lines of businesses and have significant operational and financial linkages.

The rating action reflects ICRA's expectation of sustained healthy volume growth in the upcoming fiscals, driven by the company's the incremental volumes from the upcoming manufacturing facilities over the next two fiscals. The volume increase is expected to support the Group's operating profitability, financial risk profile and comfortable liquidity position, owing to its low working capital intensity. The Group is expected to sustain its revenue growth momentum in the medium term, following a 14% and 12% revenue growth in FY2025 and FY2024 respectively. The group reported an OPBITDA of ~Rs. 1,199 crore in FY2025 vis-à-vis ~Rs. 1,192 crore reported in FY2024, while there was interim pressure on profitability in Q2 FY2025, due to inventory losses, the profitability recovered in subsequent quarters. ICRA expects the profitability to improve further on the back of volume growth, resulting in comfortable debt protection metrics for the full fiscal. In addition, the margins are expected to remain healthy over the medium term with expected OPBITDA/tonne of Rs.4,000-4,500, supported by the likely increase in the proportion of value-added products and better operational efficiency arising from higher scale.

ICRA expects the Group's financial risk profile to improve on a sustained basis in the medium term, owing to higher cash flow generation (resulting from increased scale of operations and sustained profitability), scheduled amortisation of debt and no major debt funded capex plans in the upcoming fiscals. Besides, the Group has been able to sustain its low gross working capital cycle in the recent fiscals on the back of an efficient working capital management, which has supported its cash flow generation. ICRA expects the Group to continue to report healthy debt coverage metrics, as corroborated by an interest cover of 9 times in FY2025 and no debt funded capex plans envisaged over the medium term. The rating also reflects the Group's leadership position in the domestic electric resistance welded (ERW) pipes segment, corroborated by its sizeable steel tube/pipes-making capacity across its geographically diversified manufacturing base in India and a large network of more than 800 dealers across the country. In addition, with the commissioning of the capacity in Raipur (Chhattisgarh) in FY2023, Group's total capacity increased to ~4.5 MTPA from ~2.65 MTPA earlier, enhancing its leadership position in the industry.

Despite its established position in the steel tubes and pipes industry, the ratings are constrained by the intense competition in the industry due to the presence of a large number of both organised and unorganised players. This moderates the Group's pricing power, making it more vulnerable to the volatility in steel prices. In addition, the Group's ability to ramp up the Raipur capacity to optimal levels in the near to medium term remains a key rating monitorable.

The Stable outlook on the long-term rating reflects ICRA's expectation that the company would maintain its leadership position in the organised sector in the ERW pipe segment with increasing focus on value-added products.

Key rating drivers and their description

Credit strengths

Sustained growth in volumes; momentum likely to continue in the medium term – The Group reported a sustained growth in performance in FY2025, recording its highest sales volume of 3.16 mtpa, which was 21% higher on a YoY basis. It also recorded the revenue in excess of Rs. 20,690 crore (consolidated) in FY2025, a YoY growth of 14%. The Group is expected to continue to report healthy volume growth in the upcoming fiscals as well. The growth has largely been driven by the continued pick-up in sales volumes from ABPPL. Company reported OPBITDA at ~Rs. 1,199 crore in FY2025 vis-à-vis ~Rs. 1,192 crore in FY2024. Profitability is likely to remain healthy over the medium term with expected OPBITDA/tonne of Rs.4,000-4,500, supported by the likely increase in the proportion of value-added products and better operational efficiency arising from higher scale.

Market leadership in ERW pipes segment and extensive distribution network – The Group has a well-established position in the domestic ERW pipes segment and controls a substantial market share. The Group has been able to consistently expand its manufacturing capacities over the years to keep pace with the market growth and is now one of the largest structural steel tubes and pipes players globally, with a capacity of 4.15 mtpa. Additionally, it has established a large network of more than 800 dealer distributors and over 50,000 retailers across the country over three decades of its existence.

Geographically-diversified manufacturing presence and product profile – The Group has an established manufacturing base with 10 plants in 6 locations across the country and 1 plant in Dubai, through organic as well as inorganic expansions, over the fiscals. The company has also been strengthening its product portfolio from standard MS Black, GI and GP pipes to new value-added products such as large-diameter pipes (1000x1000 mm), colour-coated pipes and products, patented products for building material applications as well as products to cater to the retail requirements in the home décor segment like door frame, staircase steps, furniture, plank, designer tubes etc. Besides facilitating better margins due to higher OPBITDA/tonne from value-added products, the diversification allows the company to be better placed to serve new market segments. This apart, the Group has set up a 0.3-mtpa ERW pipe plant in Dubai in the current fiscal to diversify globally and enter new markets.

Sustained low working capital intensity – The Group has consistently maintained a low working capital intensity, as corroborated by its net working capital, which stood at ~0-2% of its operating income (NWC/OI), over the last three fiscals. This was possible on the back of a fall in its gross working capital cycle by reducing its receivable as well as inventory turnover period over the past three fiscals. The Group's receivable days have remained at less than 10 in recent fiscals from ~30 days earlier, led by its strategic shift to the cash-and-carry model. Further, the inventory turnover period has also reduced to less than 40 days in recent fiscals from more than 40 days on the back of better planning and management.

Strong financial risk profile – The Group has a strong financial risk profile, characterised by a conservative capital structure, negative net debt and healthy coverage metrics (interest cover of ~9 times in FY2025). A healthy growth in turnover along with improved profitability and a prudent working capital management enabled the company to generate robust free cash flows. With expectation of healthy cash flow from operations and a sustained profitability in the medium term, the company's reliance on debt is expected to go down further, supported by ongoing scheduled repayments. Its capitalisation and coverage metrics are likely to remain healthy.

Credit challenges

Vulnerability of operating profitability to raw material price movement – Being a steel convertor, the Group is exposed to the volatility in steel prices on account of a lag in price adjustments following fluctuations in the price of hot-rolled coils, in addition to inventory maintenance. Hence, prudent working capital management is crucial to safeguard against any significant

price movement. The company's focus on working capital management and increasing the proportion of value-added products in the revenue mix mitigate the risk to some extent. Nevertheless, in case of an adverse demand-supply scenario, the inability to pass on the raw material price hike to its buyers could affect the profitability.

Intense competition from organised and unorganised players – The ERW pipes market is inherently competitive with the presence of several established players. As ERW pipe manufacturing is not a capital-intensive process, the entry barriers are low and, hence, the industry has many unorganised players.

Risks associated with additional capacities and scaling up of volumes – Although the commissioning of ABPPL's capacities is expected to strengthen the Group's consolidated operational profile, it is exposed to execution and stabilisation risks in the near term. Therefore, the Group's ability to steadily ramp up production and ensure a healthy scale-up of operations will remain crucial for its return and coverage metrics, going forward. However, ICRA draws comfort from its demonstrated track record of successful implementation and ramp-up of the past capacity expansion/acquisition.

Liquidity position: Strong

The Group's liquidity position is strong, corroborated by cash and bank balances and liquid investments of ~Rs. 575 crore as on March 31, 2025. With no major debt-funded capex plans in the upcoming fiscals, ICRA expects the company's cash flow from operations to be adequate to meet the scheduled debt repayment obligations and capex requirements in the upcoming fiscals. The liquidity profile is also supported by an adequate cushion in the form of undrawn working capital limits, averaging ~Rs. 320 crore against the drawing power in the six-month period ended April 2025. The scheduled repayment obligations are expected to be ~Rs. 160 crore in FY2026.

Rating sensitivities

Positive factors – ICRA could upgrade the company's rating if it demonstrates a significant growth in its operating income and profitability, along with strong liquidity and coverage metrics.

Negative factors – Pressure on the ratings could emerge in case of a sustained deterioration in profitability and cash accruals, or if any sizeable debt-funded capex/investment/acquisition results in an increase in the total debt/OPBDITA to more than 0.75 times on a sustained basis.

Analytical approach

Analytical approach	Comments
Applicable rating methodologies	Corporate Credit Rating Methodology
Parent/Group support	Not Applicable
Consolidation/Standalone	For arriving at the ratings, ICRA has combined the business and financial profiles of various Group entities (as mentioned in below Annexure), given the close business, financial and managerial linkages among the entities.

About the company

APL Apollo Building Products Private Limited was incorporated in FY2020 as a wholly owned subsidiary of APL Apollo Tubes Limited. ABPPL houses 1.5 mtpa ERW/structural tubes capacity in the value-added segment in Raipur (Chhattisgarh).

APL Apollo Tubes Limited (AATL) was incorporated in February 1986 as Bihar Tubes Private Limited with its headquarters in Delhi-NCR. AATL is the largest ERW pipe/ structural steel tube manufacturer in India. The company operates 11 manufacturing facilities across India with a total installed capacity of 4.5 million tonnes per annum (including Dubai). The Group's product

offerings include 1,100+ varieties of Pre- Galvanized Tubes, Structural Steel Tubes, Galvanized Tubes, MS Black Pipes and Hollow Sections (rectangular and square cross section). These tubes have a wide spectrum of applications in urban infrastructure and real estate, rural housing, commercial construction, greenhouse structures and engineering applications. The Group has also established a large pan-India distribution network of around 800 dealer distributors and over 50,000 retailers over the years.

Complexity level of the rated instruments

Instrument	Complexity Indicator
Commercial paper	Very Simple
Long term Fund-based: Term Loan	Simple
Long/short term Fund-based: Working Capital Facilities	Simple

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click here](#)
