Premier Alloys & Chemicals Private Limited: Rating downgraded to [ICRA]BBB(Stable); outlook revised to Stable

Summary of rating action

Instrument*	Previous rated amount (Rs. crore)	Current rated amount (Rs. crore)	Rating action
Long Term-Cash Credit-Fund Based	34.00	34.00	[ICRA]BBB(Stable); downgraded from [ICRA]BBB+(Negative); outlook revised to Stable from Negative
Total	34.00	34.00	

*Instrument details are provided in Annexure-I

Rationale

The revision in the rating considers the weaker-than-expected performance of Premier Alloys & Chemicals Private Limited (PACPL) in FY2025 on a provisional basis as the revenue declined by 9% with continued lower realisations compared to the expected levels. The company's operating margins remained low at 0.6% in FY2025, resulting in a deterioration in the entity's coverage indicators as compared to FY23 and previous years. The interest coverage ratio declined to 1.9 times in FY2025 on provisional basis though was marginally better from 1.5 times in FY24, however reduced from 14.0 times in FY2023. Nonetheless, total debt/OPBDITA remained at 0.9 times in FY25 owing to limited debt as compared to 2.6 times in FY24. Further, the liquidity is adequate, with sufficient cushion of ~Rs. 32 crore in the working capital limits and free cash and bank balances of Rs. 8.88 crore as on March 31, 2025. In Q1FY2026, however, the performance improved with stability in the prices and introduction of BIS standards in the manufacturing of Ferro Vanadium and Ferro Molybdenum effective March 2025, which has supported the margins of the entity. The sustainability of the improved performance, supporting the earnings in FY2026 will remain the key rating sensitivity.

The rating remains supported by PACPL's established presence in the noble ferro alloys industry, being among the top industry players with a healthy market share and an established relationship with reputed clients as well as suppliers. PACPL is one of the largest producers of ferro-vanadium (FeV) and ferro-molybdenum (FeMo) and its client base includes reputed players such as the Steel Authority of India Limited (SAIL), Tata Steel Limited, Jindal Steel & Power Limited (JSPL) and JSW Steel Limited. PACPL's capital structure remained comfortable with a gearing of 0.03 times in FY2025 on provisional basis.

The company's revenues have remained susceptible to the cyclical nature associated with the steel industry as it derives most of its revenues from the steel sector. The rating also considers the exposure of PACPL's margins to the fluctuations in foreign exchange rates and raw material prices and the supplier concentration for sourcing key raw materials, which exposes the company to the risk of potential delays in their timely availability. However, such risks are partially mitigated by the company's established relationships with the suppliers, as well as its recent initiatives to diversify the supplier base to newer geographies in South east Asia and Latin America.

ICRA notes that the low duty differential between the prices of imported raw materials with finished goods and the free trade agreements (FTAs) with key producer countries have resulted in pricing parity between imported and domestic products, raising concerns over import substitution risk and exerting pressure on the overall profitability, however with BIS standards in place, the preference to domestic manufacturers is likely to mitigate the impact to an extent.

Key rating drivers and their description

Credit strengths

Established presence in noble ferro alloys industry – PACPL has a long track record of over 40 years in the noble ferro alloys industry, resulting in established relationships with customers and suppliers. It is one of the largest manufacturers of FeV and FeMo in India with a sizeable market share.

Reputed customer base – PACPL is one of the largest producers of FeV and FeMo and its client base includes reputed players such as SAIL, Tata Steel, JSPL, JSW Steel, etc. Although the customer concentration remains high, the company has been associated with these clients for a long period, resulting in repeat orders and mitigating the client concentration risks to an extent. The established client profile mitigates the counterparty credit risks as well.

Comfortable capital structure – The company's capital structure remained comfortable with a gearing of 0.03 times on provisional basis as on March 31, 2025. ICRA expects the capital structure to remain low over the medium term, supported by reduced debt levels and no major capex plans.

Credit challenges

Weaker-than-anticipated performance in FY2025 – PACPL's performance in FY2025 remained constrained owing to a decline in realisation of ferro vanadium which continued to decline in FY2025. PACPL's revenues fell by ~9% in FY2025 on provisional basis due to a decline in realisations. The company's operating margins continued to be 0.6% in FY2025 from 0.6% in FY2024 as compared to 7.1% in FY2023, resulting in a deterioration in the entity's coverage indicators. The interest coverage ratio declined to 1.9 times in FY2025, from 14.0 times in FY2023. In Q1FY2026, however, the performance improved with stability in the prices and introduction of BIS standards in the manufacturing of Ferro Vanadium and Ferro Molybdenum effective March 2025, which has supported the margins of the entity. The sustainability of the improved performance, supporting the earnings in FY2026 will remain the key rating sensitivity.

Susceptibility of revenues to cyclical nature of end-user steel industry – PACPL's products find application in the special steels, chemical industry, super alloys/public aerospace and batteries in the automobile segment. The company's operating income has remained vulnerable to the cyclical nature in the steel industry.

Import substitution risk – The company is heavily reliant on imports, given the non-availability of raw materials (ore reserves) in the country. Quite a few end-users prefer to import the finished goods directly as the price differential between imported finished goods and domestic goods is low. This increases the import substitution risk, especially from countries like South Korea with whom India has FTAs.

Exposed to foreign exchange fluctuation – The company is exposed to foreign currency fluctuations as a sizeable raw material requirement is imported from suppliers located outside India, resulting in a long lead time for delivery. However, the company's long relationship with the customers helps it renegotiate the quoted prices, which partly compensates for any adverse movement in foreign currency fluctuations and a consequent rise in input costs.

Liquidity position: Adequate

Healthy retained cash flows from operations and moderate working capital and capex requirements of the business have resulted in an adequate liquidity position for the company. The average utilisation of the cash credit facilities during April 2024 to May 2025 was at a comfortable level of ~17% of the sanctioned limits. Moreover, the liquidity position is expected to remain comfortable in the near term with no scheduled debt repayment obligations and expectations of positive cash flow from operations.

Rating sensitivities

Positive factors – The rating could be upgraded if there is a significant growth in earnings leading to an improvement in the debt protection metrics.

Negative factors – The rating could be downgraded if there is sustained pressure on the profitability and debt coverage indicators, or if there is any sizeable dividend payout which could impact the liquidity position. A specific credit metric for downgrade would be an interest coverage below 3.5 times on a sustained basis.

About the company

PACPL, based in Hyderabad, was started as a proprietary concern in 1978 by Mr. G. S. Marda and was converted into a private limited company in 1988. It manufactures two noble ferro alloys, namely ferro vanadium (FeV) and ferro molybdenum (FeMo). In addition, the company sells the intermediate (chemical) products, that is, vanadium pentoxide (V₂O₅) and ammonium meta vanadate (NH₄VO₃). PACPL.

Complexity level of the rated instruments

Instrument	Complexity indicator
Long Term-Cash Credit-Fund Based	Simple

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click here](#)
