WheelsEMI Private Limited: Ratings confirmed as final for PTCs backed by vehicle loan receivables issued by Cooper Trust 010

Summary of rating action

Trust name	Instrument*	Current rated amount (Rs. crore)	Rating action
Cooper Trust 010	Series A1 PTC	27.73	[ICRA]A(SO); provisional rating confirmed as final
	Equity Tranche PTC	1.59	[ICRA]BBB+(SO); provisional rating confirmed as final

*Instrument details are provided in Annexure I

Rationale

ICRA had assigned provisional rating to Series A1 PTC and Equity Tranche PTC issued by Cooper Trust 010 under a securitisation transaction originated by WheelsEMI Private Limited {WheelsEMI/Originator; rated [ICRA]BBB(Stable)}. The PTCs are backed by a pool of vehicle loan receivables originated by WheelsEMI with an aggregate principal outstanding of Rs. 31.88 crore (pool receivables of Rs. 40.07 crore). WheelsEMI also acts as the servicer for the transaction.

Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said ratings have now been confirmed as final.

Pool performance summary

Parameter	Cooper Trust 010
Payout Month	September 2025
Months post securitisation	2
Pool amortisation	8.7%
Series A1 PTC amortisation	12.8%
Equity Tranche PTC amortization	0.0%
Cumulative prepayment rate	0.8%
Cumulative collection efficiency ¹	98.2%
Monthly collection efficiency	98.2%
Loss cum 0+ dpd ²	3.2%
Loss cum 30+ dpd ³	0.5%
Loss cum 90+ dpd ⁴	0.0%
Cumulative credit collateral utilisation	0.0%

¹ Cumulative collections (incl. advances)/ (Cumulative billings + Opening overdue at the time of securitisation)

² Principal outstanding on contracts aged 0+ dpd / Principal outstanding on the pool at the time of securitisation

³ Principal outstanding on contracts aged 30+ dpd / Principal outstanding on the pool at the time of securitisation

⁴ Principal outstanding on contracts aged 90+ dpd / Principal outstanding on the pool at the time of securitisation

Transaction structure

As per the transaction structure, the monthly cash flow schedule comprises the promised interest payout to Series A1 PTC. The principal is expected to be paid on a monthly basis (100% of the pool principal billed), first to Series A1 PTC and then to the Equity Tranche PTC (after Series A1 PTC is fully paid off) but is promised on the final maturity date. Any surplus excess interest spread (EIS) after making the promised and expected payments shall be passed on to the Series A1 PTC investors on every payout date. Any prepayment in the pool would be used for the prepayment of the Series A1 PTC principal.

The credit enhancement available in the structure is in the form of (i) a cash collateral (CC) of 5.00% of the initial pool principal, amounting to Rs. 1.59 crore, to be provided by the Originator, (ii) principal subordination of 13.00% (comprising Equity Tranche of 5.00% and over-collateralisation (OC) of 8.00%) of the initial pool principal for Series A1 PTC and 8.00% for the Equity Tranche PTC, and (iii) the EIS of 19.05% of the pool principal for both tranches.

Key rating drivers and their description

Credit strengths

Granular pool supported by presence of credit enhancement – The current pool is granular, consisting of 3,953 contracts with the top 10 contracts forming less than ~1% of the pool principal, thereby reducing the exposure to any single borrower. Further, the credit enhancement available in the form of the CC, subordination and EIS would absorb a part of the losses in the pool and provide support in meeting the PTC payouts.

Healthy bureau score of borrowers – Around 86% of the contracts in the pool belong to borrowers with a CIBIL score of at least 700, which reflects their relatively better credit profile.

No overdue contracts in the pool – The pool has been filtered in such a manner that there were no overdue contracts as on the cut-off date. Further, all the contracts in the pool have never been delinquent after loan disbursement, reflecting the borrowers' relatively better credit profile, which is a credit positive.

Adequate servicing capability of WheelsEMI – The Originator has adequate processes for servicing of the loan accounts in the securitised pool. It has demonstrated a considerable track record of over a decade of regular collections across geographies and multiple economic cycles.

Credit challenges

High geographical concentration – The pool has high geographical concentration with the top 3 states, viz Uttar Pradesh, Bihar and Kerala, contributing ~73% to the initial pool principal amount. The pool's performance would thus be exposed to any state-wide disruption that may occur due to natural calamities, political events, etc.

Risks associated with lending business – The pool's performance would remain exposed to macro-economic shocks, business disruptions and natural calamities that may impact the income-generating capability of the borrowers and their ability to make timely repayments of their loans.

Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pool, ICRA has estimated the shortfall in the pool principal collection during its tenure at 5.00% of the pool principal with certain variability around it. The average prepayment rate for the underlying pool is modelled in the range of 2.4% to 9.0% per annum. Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the final ratings for the instruments.

Details of key counterparties

The key counterparties in the rated transaction are as mentioned below:

Transaction Name	Cooper Trust 010
Originator	WheelsEmi Private Limited
Servicer	WheelsEmi Private Limited
Trustee	Catalyst Trusteeship Limited
CC holding bank	SBM Bank (India) Limited
Collection and payout account Bank	ICICI Bank Limited

Liquidity position:

Series A1 PTC: Superior

The liquidity for Series A1 PTC is superior after factoring in the credit enhancement available to meet the promised payout to the investor. The total credit enhancement would be ~6.50 times the estimated loss in the pool.

Equity Tranche PTC: Strong

The liquidity for the Equity Tranche PTC is strong after factoring in the credit enhancement available to meet the promised payout to the investor. The total credit enhancement would be ~5.50 times the estimated loss in the pool.

Rating sensitivities

Positive factors – The ratings could be upgraded on the strong collection performance of the underlying pool (monthly collection efficiency >95%) on a sustained basis, leading to the build-up of the credit enhancement cover for the remaining payouts.

Negative factors – The sustained weak collection performance of the underlying pool (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher credit enhancement utilisation levels, would result in a rating downgrade. Weakening in the credit profile of the servicer could also exert pressure on the ratings.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Complexity level of the rated instrument

Instrument	Complexity Indicator
Series A1 PTC	Moderately Complex
Equity Tranche PTC	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click here](#)
