### Rationale

The pass-through certificates (PTCs) and second loss facility (SLF) are backed by vehicle loan receivables originated by Cholamandalam Investment and Finance Company Limited (CIFCL/Originator; rated [ICRA]AA+ (Positive)/[ICRA]A1+). CIFCL is also the servicer for the transactions.

The ratings' reaffirmation factors in the build-up of the credit enhancement cover over the future PTC payouts on account of the moderate amortisation and healthy performance of the pools. The ratings also draw comfort from the fact that the breakeven collection efficiency is comfortably below the actual collection level observed in the pools till the October 2025 payout month.

## Key rating drivers and their description

### Credit strengths

**Adequate servicing capability of CIFCL** – CIFCL, which is also servicing the loans in the transactions, has an established track record of more than four decades in the lending business with adequate underwriting policies and collection procedures across a wide geography. It also has satisfactory processes for servicing the loan accounts in the securitised pools.

<sup>5</sup> (Pool cash flows – Cash flows to PTC A)/Pool principal outstanding

**Build-up of credit enhancement available in the structure** – The ratings factor in the build-up of credit enhancement for the transactions, with a higher CC available as a percentage of the balance pool principal compared to the initial CC at the time of securitisation. Internal credit support is also available through the scheduled EIS for the pool.

**Healthy pool performance** – The delinquency in the pools has remained low with the loss-cum-90+ days past due (dpd; as percentage of initial pool principal) at less than 1.40% since securitisation (after the October 2025 payout) for all the transactions. Further, the performance of the pools has been healthy with the cumulative collection efficiency above 98%, comfortably higher than the breakeven collection efficiency level.

## Credit challenges

**Risks associated with lending business** – The pools' performance would remain exposed to macroeconomic shocks, business disruptions and natural calamities that may impact the income-generating capability of the borrowers and their ability to make timely repayments of their loans.

## Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pools, ICRA has estimated the shortfall in principal collection and prepayments during the tenure as provided in the following table.

Transaction name	Estimated shortfall (% of initial pool principal)	Prepayment (p.a.)
PLATINUM TRUST AUG 2023 - TRANCHE II	1.50%	4.8% - 18.0%
PLATINUM TRUST SEP 2024 - TRANCHE II	2.00%	4.8% - 18.0%
PLATINUM TRUST OCT 2024 - TRANCHE I	1.25%	4.8% - 18.0%

Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the ratings for the instruments.

## Rating sensitivities

**Positive factors** – Not applicable for PTC Series A of PLATINUM TRUST AUG 2023 - TRANCHE II and PLATINUM TRUST OCT 2024 - TRANCHE I and PTC Series A1 of PLATINUM TRUST SEP 2024 - TRANCHE II

The rating for the SLF of PLATINUM TRUST AUG 2023 - TRANCHE II and PLATINUM TRUST OCT 2024 - TRANCHE I can be upgraded on the sustained strong collection performance of the underlying pool of contracts, resulting in an increase in the credit enhancement cover available for the SLF.

**Negative factors** – Pressure on the ratings could emerge on the sustained weak collection performance of the underlying pool (monthly collection efficiency of <90%), leading to higher-than-expected delinquency levels and credit enhancement utilisation levels. Weakening in the credit profile of the servicer could also exert pressure on the ratings.

## Analytical approach

The rating action is based on the performance of the pools till the October 2025 payout month, the present delinquency profile of the pool of contracts, the performance expected over the balance pool tenure, and the credit enhancement available in the transactions.
