## Midland Microfin Limited: Ratings confirmed as final for PTCs backed by microfinance loan receivables issued by Newton 08 2025

### Summary of rating action

Trust name	Instrument*	Current rated amount (Rs. crore)	Rating action
Newton 08 2025	Series A1 PTC	43.99	[ICRA]AA-(SO); provisional rating confirmed as final
	Series A2 PTC	1.57	[ICRA]A+(SO); provisional rating confirmed as final

\*Instrument details are provided in Annexure I

### Rationale

ICRA had assigned provisional ratings to Series A1 PTC and Series A2 PTC issued by Newton 08 2025 under a securitisation transaction originated by Midland Microfin Limited (MML/Originator). The PTCs are backed by a pool of microfinance loan receivables originated by MML with an aggregate principal outstanding of Rs. 52.37 crore (pool receivables of Rs. 63.52 crore). MML also acts as the servicer for the transaction.

Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said ratings have now been confirmed as final.

### Pool performance summary:

Parameter	Newton 08 2025
Payout Month	November 2025
Months post securitisation	3
Pool amortisation	24.6%
Series A1 PTC amortisation	31.1%
Series A2 PTC amortisation	0.0%
Cumulative collection efficiency <sup>1</sup>	98.3%
Monthly collection efficiency	96.8%
Cumulative Prepayment rate	0.3%
Loss-cum-0+ dpd <sup>2</sup>	3.5%
Loss-cum-30+ dpd <sup>3</sup>	1.8%
Loss-cum-90+ dpd <sup>4</sup>	0.5%
Cumulative cash collateral utilisation (CC)	0.0%

### Transaction structure

As per the transaction structure, Series A2 PTC is subordinate to Series A1 PTC. During the tenure of Series A1 PTC, the collections from the pool will be used to make the promised interest payouts and the expected principal payouts (100% of the pool principal billed) to Series A1 PTC. Post the maturity of Series A1 PTC, the collections from the pool will be used to make the promised interest payouts and the expected principal payouts to Series A2 PTC, which will be due and payable only on the final maturity date. The residual cash flows from the pool, after meeting the promised and expected payouts, will be used for

<sup>1</sup> Cumulative collections (incl. advances)/ (Cumulative billings + Opening overdue at the time of securitisation)

<sup>2</sup> Principal outstanding on contracts aged 0+ dpd / Principal outstanding on the pool at the time of securitisation

<sup>3</sup> Principal outstanding on contracts aged 30+ dpd / Principal outstanding on the pool at the time of securitisation

<sup>4</sup> Principal outstanding on contracts aged 90+ dpd / Principal outstanding on the pool at the time of securitisation

the prepayment of Series A1 PTC principal. Any prepayment in the pool would be used for the prepayment of Series A1 PTC principal, followed by Series A2 PTC principal.

The credit enhancement available in the structure is in the form of (i) a cash collateral (CC) of 8.00% of the initial pool principal, amounting to Rs. 4.19 crore, provided by the Originator, (ii) principal subordination/over-collateralisation (OC) of 16.00% of the initial pool principal for Series A1 PTC in the form of Series A2 PTC and over-collateralisation, OC of 13.00% of the initial pool principal for Series A2 PTC and (iii) the excess interest spread (EIS) of 17.05% and 16.66% of the initial pool principal for Series A1 PTC and Series A2 PTC respectively.

## Key rating drivers and their description

### Credit strengths

**Granular pool supported by presence of credit enhancement** – The pool is granular, consisting of 14,276 contracts, with top 10 obligors forming less than 1.00% of the pool principal, thereby reducing the exposure to any single borrower. Further, the credit enhancement available in the form of the CC, overcollateral and EIS would absorb some amount of the losses in the pool and provide support in meeting the PTC payouts.

**Seasoned contracts in the pool** – The pool has amortised by almost ~22% as on the cut-off date with no delinquencies observed in any of the contracts, post loan disbursement, thereby reflecting the borrowers' relatively better credit profile.

**No overdue contracts in the pool** – The pool has been filtered in such a manner that there are no overdue contracts as on the cut-off date. Further, none of the contracts in the pool have ever been delinquent, which is credit positive.

**Adequate servicing capability of Midland** – The originator has adequate processes for servicing of the loan accounts in the securitised pool. It has demonstrated a considerable track record of over a decade of regular collections across geographies and multiple economic cycles.

### Credit challenges

**High geographical concentration** - The pool has high geographical concentration with the top 3 states, viz. Rajasthan, Uttar Pradesh and Bihar contributing ~55% to the initial pool principal amount. The concentration remains high even at district-level with top 5 districts accounting for ~12.4% of the initial pool principal amount. The pool's performance would thus be exposed to any state-wide disruption that may occur due to natural calamities, political events, etc.

**Increasing delinquencies in microfinance sector** – The microfinance sector has seen a decline in collections and consequently rise in delinquencies in the previous fiscal on account of multiple factors like heat wave, general elections, borrower overleveraging and attrition in the collection teams. Any sustained impact of these factors on the collections from the pool would be a key monitorable.

**Risks associated with lending business** – The pool's performance would remain exposed to macro-economic shocks, business disruptions and natural calamities that may impact the income-generating capability of the borrowers and their ability to make timely repayments of their loans. The performance of microfinance loans would also be exposed to political and communal risks.

## Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pool, ICRA has estimated the shortfall in the pool principal collection during its tenure at 5.25% of the pool principal with certain variability around it. The average prepayment rate for the underlying pool is modelled in the range of 3% to 9% per annum. Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the final rating for the instrument.

## Details of key counterparties

The key counterparties in the rated transaction are as mentioned below:

Transaction Name	Newton 08 2025
Originator	Midland Microfin Limited
Servicer	Midland Microfin Limited
Trustee	Catalyst Trusteeship Limited
CC holding bank	DCB Bank
Collection and payout account Bank	ICICI Bank Limited

## Liquidity position:

### Superior for Series A1 PTC

The liquidity for Series A1 PTC is superior after factoring in the credit enhancement available to meet the promised payout to the investor. The total credit enhancement would be ~7.25 times the estimated loss in the pool.

### Superior for Series A2 PTC

The liquidity for Series A2 PTC is superior after factoring in the credit enhancement available to meet the promised payout to the investor. The total credit enhancement would be ~6.50 times the estimated loss in the pool.

## Rating sensitivities

**Positive factors** – The sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and an increase in the cover available for future investor payouts from the credit enhancement would result in a rating upgrade.

**Negative factors** – The sustained weak collection performance of the underlying pool of contracts (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher credit enhancement utilisation levels, would result in a rating downgrade. Weakening in the credit profile of the servicer could also exert pressure on the rating.

## Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

### Complexity level of the rated instrument

Instrument	Complexity Indicator
Series A1 PTC	Highly Complex
Series A2 PTC	Highly Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click here](#)
