Genus Marudhara Smart Metering SPV Private Limited: [ICRA]AA- (Stable); Assigned

Summary of rating action

Instrument*	Current rated amount (Rs. crore)	Rating action
Long-term – Fund-based – Term loan**	320.00	[ICRA]AA- (Stable); assigned
Long-term – Non-fund based – Bank guarantee**	52.00	[ICRA]AA- (Stable); assigned
Long-term – Unallocated	3.00	[ICRA]AA- (Stable); assigned
Total	375.00	

*Instrument details are provided in Annexure I; ** Proposed limit

Rationale

ICRA's proposed rating for Genus Marudhara Smart Metering SPV Private Limited (GMSMSPL) factors in the long-term contract for installation of advanced metering infrastructure (AMI) with Jodhpur Vidyut Vitran Nigan Limited (JdVVNL). The company is responsible for installing 9,74,168 smart meters along with the associated infrastructure within 27 months of signing the contract across the districts of Barmer, Jalore, and Jaisalmer in Rajasthan. As per the contract, the company will receive fixed monthly service charges for operational meters through the operating period of 93 months, subject to meeting the stipulated operating parameters, thereby providing long-term revenue visibility. The company would also receive a lumpsum grant, after achieving operational go-live for the smart meters.

ICRA notes there has been steady progress in installation of meters with around 16% of the meters installed as of December 2025. Installation activity is anticipated to accelerate in the coming months. The rating also factors in the availability of a fixed engineering, procurement, and construction (EPC) and operations and maintenance (O&M) contract with Genus Power Infrastructures Limited (GPIL), thereby mitigating the cost variation risk for the project. The company is yet to avail a long-term fund-based term loan facility to fund the capex for the smart meters. However, as per proposed debt terms, ICRA expects the company to maintain adequate debt coverage metrics with a cumulative DSCR in the range of 1.25x-1.3x times on the term loan facility.

Further, the rating factors in the company's experienced management team and strong sponsors. GPIL and Gem View Investments Pte Limited (Gem View), which is a wholly-owned subsidiary of GIC Infra Holdings Pte Ltd. (GIH), set up Gemstar Infra Pte Ltd (GIPL), a platform that has been set up for implanting smart metering projects in various states in India. Gem View holds 74% stake while GPIL holds 26% stake in GIPL. GMSMSPL is a subsidiary of Genus Metering Communication Private Limited (GMCPL), which in turn is a wholly owned subsidiary of GPIL. However, GIPL remains the ultimate sponsor of the project with the responsibility of arranging funding requirements. Gem View controls all the management rights with majority board representation in the platform. Further, the rating factors in the strong sponsors who are expected to provide the necessary funding support to GMSMSPL, on need basis.

The rating is constrained by project execution risk given that 84% of the meters are yet to be installed as of December 2025. As per contract terms, all meter installations need to be completed by February 2027. However, the company has demonstrated satisfactory progress in installations till date. As per the contract, there are milestones identified under which liquidated damages (LDs) are applicable and any delays pursuant to those milestones for reasons attributable to the company would attract LDs from JdVVNL. Nevertheless, the company is contractually protected against any LDs imposed by JdVVNL through a back-to-back arrangement with the EPC contractor, GPIL. Further, meters not installed at the end of the execution

period due to non-availability of access to the site or other issues attributable to JdVVNL would be descope and the debt would not be drawn for these meters.

The ratings are further constrained by a single counterparty (JdVVNL), which exposes GMSMSPL to credit risk. ICRA notes that the project has a direct debit facility (DDF) wherein the online payments made by the consumers of JdVVNL will be deposited into the DDF and shall be first used to clear the payments to GMSMSPL; thereafter, the funds will flow to JdVVNL. However, there is no track record of payments from utility as the operational go live is yet to be achieved and timely realisation of the payment will remain a key monitorable factor, going forward. In addition, the company's ability to demonstrate compliance with the service level thresholds (SLA), as per the contract, related to meter availability, data collection and delivery of recharge, among others, remains a key monitorable, given that there are provisions for penalty in case of underperformance against these SLAs.

The Stable outlook on the rating derives comfort from the satisfactory progress in project execution so far and ICRA's opinion that the company will benefit from its long-term Advanced Metering Infrastructure Service Provider (AMISP) contract with JdVVNL.

Key rating drivers and their description

Credit strengths

Comfort drawn from strong sponsor profile and experienced management team – GMSMSPL is a subsidiary of GMCPL, which in turn is a wholly-owned subsidiary of GPIL. However, GPIL remains the ultimate sponsor of the project with the responsibility of arranging the funding requirements. GPIL is a platform set up by Gem View and GPIL to implement smart meter projects in various states of India. Gem View, which is a wholly-owned subsidiary of GIH, holds 74% stake in GPIL, while GPIL has a 26% stake. GPIL has a long track record in the electricity metering business and is among the top players in India's smart metering solutions industry. It has successfully executed multiple projects under the AMISP model. Hence, the rating factors in the superior financial flexibility offered by its strong sponsors and the experienced management team of the platform. ICRA expects the sponsors to provide the necessary funding support to GMSMSPL, if required

Long-term AMISP contract provides revenue visibility – GMSMSPL has signed a long-term contract with JdVVNL for installing and operating 9,74,168 meters along with associated infrastructure. The contract tenure includes an installation period of 27 months for all the meters and operating period of 93 months for each meter. As of December 2025, the company has installed around 16% of the meters. The presence of a fixed service charge provides long-term revenue visibility.

Credit challenges

Project execution risk – The company is exposed to project execution risk, given that almost 84% of the meters are yet to be installed as of December 2025. The execution risk can mainly arise due to the inability to access the identified sites for meter installation. Nevertheless, the company has demonstrated satisfactory progress in installations to date. Moreover, meters not installed by the end of the execution period due to non-availability of site access or other issues attributable to GMSMSPL would be descope, and the related debt would not be drawn for such meters.

Track record of DDF arrangement remains to be seen – The project has a DDF facility, wherein online payments by consumers of JdVVNL will be deposited into the DDF and will be first utilised to clear payments to GMSMSPL; thereafter, the funds will flow to JdVVNL. The utility is required to maintain at least five times cover of the monthly service charges payable to GMSMSPL in the DDF account. Billing will commence once go live is achieved and there is no track record of timely payments from JdVVNL currently. Timely realisation of payments against invoices will remain a key monitorable, going forward. Further, ICRA expects the sponsors to provide the necessary funding support to GMSMSPL, if required.

Compliance with service level agreement requirements – As per the contract, the company is required to meet the stipulated SLAs related to meter availability, data collection, and other operational parameters for the installed meters. In the event of

non-compliance with the SLAs, penalties would be imposed on the company. At present, no penalties have been levied to date on the company. Moreover, the company is contractually protected against any SLA-related penalties imposed by JdVVNL through a back-to-back arrangement with the EPC contractor, GPIL. Any sustained underperformance against the operating parameters could adversely impact profitability and will remain a key rating sensitivity.

Liquidity position: Adequate

The liquidity of the company is expected to remain adequate with the available debt financing and equity funding from the sponsor sufficient to fund the capital investments for completing the smart metering installation. Further, the company is expected to receive the monthly service charges for the operational meters. The one-time lumpsum payments for the operationalised meters shall be used towards the capital expenditure requirements for the project. Liquidity is expected to be healthy post-COD with creation of DSRA covering three months' debt servicing requirements prior to first repayment date, to be created through sponsor funds and internal accruals. Also, the liquidity is supported by the funding support available from the strong sponsors, on need basis.

Rating sensitivities

Positive factors – A timely progress in smart meter installation, commissioning of the project and meeting the stipulated operating parameters under the AMISP contract after the go-live will be a key monitorable for an upgrade. Also, a sustained track record of timely recovery of grant payments and monthly service charges, in line with the DDF arrangement, will be the key monitorable for an upgrade.

Negative factors – Lower than estimated debt coverage metrics owing to significant delays in installation of meters, underperformance on the SLA parameters and/or delays in the receivable cycle weakening the liquidity position could result in a downgrade. Any adverse change in its linkages with sponsors can also weigh on the rating.

About the company

GMSMSPL is a Special Purpose Vehicle (SPV) incorporated by GMCPL, which in turn is wholly-owned by Genus Power Infrastructure Limited. GMSMSPL is undertaking a project to install 9,74,168 smart meters in the Lot-3 Barmer Zone (TN-34) of Rajasthan's Barmer, Jalore and Jaisalmer region on a design, build, finance, own, operate and transfer (DBFOOT) basis as per the provisions of the Request for Proposal.

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click here](#)
