Green Infra Renewable Energy Farms Private Ltd: Rating reaffirmed

Summary of rating action

Instrument*	Previous rated amount (Rs. crore)	Current rated amount (Rs. crore)	Rating action
Long-term - Fund-based - Overdraft	1.00	1.00	[ICRA]A+(Stable); Reaffirmed
Long-term - Non-fund based - Bank guarantee	290.00	290.00	[ICRA]A+(Stable); Reaffirmed
Total	291.00	291.00	

*Instrument details are provided in Annexure-I

Rationale

The rating reaffirmation for Green Infra Renewable Energy Farms Private Ltd (GIREFPL) factors in the strong credit profile of its ultimate parent –Singapore-based Sembcorp Industries Ltd (SCI) – which has a strong renewable portfolio, a diversified asset profile and a strong parentage with a 49.5% shareholding by Temasek Holdings (Private) Limited, rated Moody’s Aaa (Stable). GIREFPL remains strategically important to SCI owing to its objective to set up green hydrogen/green ammonia plants, resulting in further diversification of its portfolio.

GIREFPL will be setting up a 2,00,000-MTPA green ammonia plant, likely to be commissioned by 2029, subject to prior offtake agreement in place. Also, GIREFPL has been awarded a production-linked incentive (PLI) to produce 90,000 MTPA of green hydrogen under the Strategic Interventions for Green Hydrogen Transition (SIGHT) programme of the Government of India (GoI). The rating draws comfort from favourable Government policies, incentives linked with the production of green hydrogen and green ammonia in India and the expected long-term subsidies in key export markets such as Japan and Korea.

The rating takes into consideration that the company is bidding for offtake arrangements in Japan and Korea and the execution of the project would be taken up only after an offtake arrangement is confirmed. The rating remains constrained by project execution risks and any delays could result in cost escalation and attract liquidated damages from customers etc., impacting the returns from the project. Moreover, the price of green hydrogen/green ammonia at present is higher vis-à-vis other fuels, making it less viable, thereby requiring substantial Government support in the form of subsidies and incentives. The rating is also constrained by the technology risks associated with manufacturing green hydrogen as the technology is still evolving.

The Stable outlook on GIREFPL’s rating reflects ICRA’s opinion that the company will continue to benefit from the positive demand outlook for green hydrogen/green ammonia owing to the carbon transition initiatives of several countries.

Key rating drivers and their description

Credit strengths

Presence of a strong sponsor and experienced management team – GIREFPL is a step-down subsidiary

of Singapore-based Sembcorp Industries (SCI) through Sembcorp Utilities Pte Ltd (SCU) and Sembcorp Green Hydrogen Pte Ltd (SGHPL), Singapore, under an Indian green hydrogen Holdco, named Sembcorp Green Hydrogen India Private Limited (SGHIPL). The credit profile of SCI is supported by a healthy performance in its operating markets and the growing share of renewables in its portfolio. SCI is ~49.5% held by Temasek Holdings (Private) Limited [rated Aaa (Stable) by Moody's]. The companies within the Sembcorp Group are managed by a team of experienced technocrats and finance professionals, who have a long track record of project execution and operations. GIREFPL remains strategically important to the Sembcorp Group owing to its objective to set up green hydrogen/green ammonia plants.

Government's thrust for production of green hydrogen and green ammonia - Under the National Green Hydrogen Mission, India aims to develop a green hydrogen production capacity of at least 5 million metric tonnes (MMT) per annum with an associated renewable energy capacity addition of about 125 gigawatts (GW) by 2030. The total outlay for the mission is Rs. 19,744 crore, of which the Government has allocated Rs. 17,490 crore for the SIGHT programme, Rs. 1,466 crore for the upcoming pilot projects, Rs. 400 crore for R&D and Rs. 388 crore towards other mission components. The Government of India (GoI) has allocated incentives to 12 entities, including GIREFPL (for green hydrogen production of up to 90,000 MTPA) under the production linked incentive (PLI) scheme (Strategic Interventions for Green Hydrogen Transition programme – SIGHT 1).

Also, Solar Energy Corporation of India Limited (SECI) under the SIGHT – 2A programme has recently allocated annual capacities to seven successful bidders (green ammonia producers) who quoted the lowest supply prices for supplying green ammonia to 13 phosphatic fertiliser producers and will provide subsidy to the green ammonia producers for the first three years of production, with focus on promoting green ammonia production in India. Further, long-term subsidies are also expected in key export markets such as Japan and Korea where the green ammonia produced by GIREFPL in India is planned to be exported.

Sembcorp Group's well-diversified renewable asset base across multiple states in India - The overall renewable portfolio of the Sembcorp Group stands at around 7.60 GW, comprising an operating capacity of 3.60 GW and the balance being under development, spread over 13 states, which results in geographic diversification.

Credit challenges

Absence of offtaker agreements and execution risks associated with under development projects - GIREFPL is yet to enter into firm offtaker agreements. Further, the project remains exposed to execution risks associated with the under-development portfolio. However, the rating takes comfort from the strong execution capabilities of the Sembcorp Group with its past record of venturing into many new projects, especially in the renewable portfolio (solar and wind) and successfully scaling up such new projects. The ability to commission such projects without major cost and time overruns shall be critical.

Competition from other fuels – Green hydrogen/green ammonia faces stiff competition from other fuels, especially coal, LNG, grey ammonia, methanol etc. The levelised cost of green hydrogen is primarily driven by the capital cost (capex) of electrolyzers as well as the cost of renewable power along with other O&M costs vis-à-vis the current price of other fuels

which is considerably lower than the cost of green hydrogen/green ammonia. Meantime, Government support in the form of subsidies, incentives, contract-for-difference etc. is required to make the production and offtake of green hydrogen/green ammonia viable.

Technology risks – Considerable R&D work is being done both globally as well as in India for developing newer and better technologies which will bring down the manufacturing costs for green hydrogen, including developing better electrolyzers, increasing their efficiencies, stack life etc. As the technology for green hydrogen production is still evolving, the project remains exposed to such risks.

Liquidity position: Adequate

GIREFPL's liquidity position remains adequate, driven by ample liquidity of its parent – SCI – with healthy cash in hand as well as considerable unutilised limits at the group level as on December 31, 2025.

Rating sensitivities

Positive factors – The rating could be upgraded if the agreements are signed with the offtakers and the project's progress is timely.

Negative factors – Pressure on ratings could arise if the credit profile of the parent weakens, or if the linkage between the parent and the entity deteriorates, or if there are significant delays in project execution with cost and time overruns adversely impacting the returns.

Analytical approach

Analytical approach	Comments
Applicable rating methodologies	Corporate Credit Rating Methodology
Parent/group Support	Parent Company – Sembcorp Industries Ltd The rating is based on implicit support from the parent company/group (ultimately held by Sembcorp Industries Ltd), which is expected to extend financial support, should the need arise
Consolidation/standalone	The rating is based on the standalone financials of the entity

About the company

Green Infra Renewable Energy Farms Private Ltd (GIREFPL), incorporated in June 2023, is an SPV under Sembcorp Green Hydrogen India Private Limited (SGHIPL), which is a 100% step down subsidiary (through SGHPL) of Sembcorp Utilities Pte Ltd (SCU). SCU is a wholly-owned subsidiary of Singapore-based Sembcorp Industries Ltd. GIREFPL will be setting up a 2,00,000-MTPA green ammonia plant, to be commissioned by 2029. The land for the project has been allocated near Tuticorin Port in Tamil Nadu.

Complexity level of the rated instruments

Instrument	Complexity indicator
Long-term - Fund-based - Overdraft	Simple
Long-term - Non-fund based - Bank guarantee	Simple

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional, or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click here](#)

ABOUT ICRA LIMITED

ICRA Limited was set up in 1991 by leading financial/investment institutions, commercial banks and financial services companies as an independent and professional investment Information and Credit Rating Agency.

Today, ICRA and its subsidiaries together form the ICRA Group of Companies (Group ICRA). ICRA is a Public Limited Company, with its shares listed on the Bombay Stock Exchange and the National Stock Exchange. The international Credit Rating Agency Moody's Investors Service is ICRA's largest shareholder.
