## Sarvagram Fincare Private Limited: Provisional [ICRA]A-(SO) assigned to Series A1 PTC backed by MSME business loan receivables issued by Jirachi 2026

### Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
Jirachi 2026	Series A1 PTC	29.51	Provisional [ICRA]A-(SO); assigned

\*Instrument details are provided in Annexure I

Rating in the absence of pending actions/documents	No rating would have been assigned as it would not be meaningful
----------------------------------------------------	------------------------------------------------------------------

### Rationale

The pass-through certificates (PTCs) are backed by a pool of unsecured loan receivables originated by Sarvagram Fincare Private Limited {SFPL/Originator; rated [ICRA]BBB+ (stable)} with an aggregate principal outstanding of Rs.32.79 crore (pool receivables of Rs.43.78 crore). SFPL would also act as the servicer for the transaction.

The provisional rating is based on the strength of the cash flows from the selected pool of contracts, the credit enhancement available in the structure as well as the integrity of the legal structure. The rating is subject to the fulfilment of all the conditions under the structure and ICRA's review of the documentation pertaining to the transaction.

### Transaction structure

As per the transaction structure, the monthly cash flow schedule comprises the promised interest payout. The principal is expected to be paid on a monthly basis (100% of the pool principal billed) but is promised on the final maturity date. Any surplus excess interest spread (EIS), after meeting the promised payouts, will flow back to the Originator on a monthly basis, unless any of the below mentioned trigger events occur. Any prepayment in the pool would be used for the prepayment of Series A1 PTC principal. The EIS trigger events are as follows: -

- Asset Cover Ratio defined as Current Pool/ Net PTC [ PTC P/s less Cash Collateral O/s] becoming less than 110%
- PAR 90 of the pool exceeds more than 5% of the original Pool as on payout date [to be checked monthly]
- Cumulative liquidity mismatch in any of the standard buckets (as prescribed the RBI) of the Servicer [to be checked quarterly]
- Capital Adequacy Ratio (CAR) of the Servicer (as reported to RBI) falls below 15% [to be checked quarterly]
- Net Non-Performing Loans of the Servicer exceeds 6%, where Net Non-Performing Loans = [(PAR 90 + Restructured Troubled Loans – Total Provisions)/Asset under Management]

The credit enhancement available in the structure is in the form of (i) a cash collateral (CC) of 5.00% of the initial pool principal, amounting to Rs. 1.64 crore, to be provided by the Originator, (ii) subordination of 10.00% of the initial pool principal for Series A1 PTC in the form of over collateralisation and (iii) the excess interest spread (EIS) of 22.91% of the initial pool principal for Series A1 PTC .

## Key rating drivers and their description

### Credit strengths

**Granular pool supported by presence of credit enhancement** – The pool is granular, consisting of 1,704 contracts, with top 10 obligors forming less than 0.85% of the pool principal, thereby reducing the exposure to any single borrower. Further, the credit enhancement available in the form of the CC, overcollateral and EIS would absorb some amount of the losses in the pool and provide support in meeting the PTC payouts.

**Seasoned contracts in the pool** – The pool has amortised by almost ~25.0% as on the cut-off date with no delinquencies observed in any of the contracts, post loan disbursement, thereby reflecting the borrowers' relatively better credit profile.

**No overdue contracts in the pool** – The pool has been filtered in such a manner that there are no overdue contracts as on the cut-off date. Further, none of the contracts in the pool have ever been delinquent, which is credit positive.

**Healthy bureau score of borrowers** – ~12% of the borrowers in the pool have a bureau score of 700 and above, which reflects their relatively better credit profile.

### Credit challenges

**Limited track record of servicing ability** - Sarvagram started its operations in FY2019 and hence, the company is in a nascent stage of operations and is yet to establish a long vintage of servicing loans.

**High geographical concentration** - The pool has high geographical concentration with the top 2 states, viz Maharashtra and Karnataka contributing ~58% to the initial pool principal amount. The pool's performance would thus be exposed to any state-wide disruption that may occur due to natural calamities, political events, etc.

**Risks associated with lending business** – The pool's performance would remain exposed to macro-economic shocks, business disruptions and natural calamities that may impact the income-generating capability of the borrowers and their ability to make timely repayments of their loans. The performance of microfinance loans would also be exposed to political and communal risks.

### Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pool, ICRA has estimated the shortfall in the pool principal collection during its tenure at 7.25%, with certain variability around it. The average prepayment rate for the underlying pool is modelled in the range of 4.8% to 18% per annum. Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the final rating for the instrument.

### Liquidity position: Strong

The liquidity for Series A1 PTC is strong after factoring in the credit enhancement available to meet the promised payout to the investor. The total credit enhancement would be ~3.75 times the estimated loss in the pool.

### Rating sensitivities

**Positive factors** – The sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and an increase in the cover available for future investor payouts from the credit enhancement would result in a rating upgrade

**Negative factors** – The sustained weak collection performance of the underlying pool of contracts (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher credit enhancement utilisation levels, would result in a rating downgrade. Weakening in the credit profile of the servicer could also exert pressure on the rating.

### Analytical approach

The rating action is based on the analysis of the performance of SFPL’s portfolio till December 2025, the key characteristics and composition of the current pool, the performance expected over the balance tenure of the pool, and the credit enhancement cover available in the transaction.

Consolidation/Standalone	Not applicable

### Pending actions/documents required to be completed for conversion of the provisional rating into final

The assigned rating is provisional and would be converted into final upon the execution of:

1. Trust deed
2. Assignment agreement
3. Power of Attorney
4. Legal opinion
5. Trustee letter
6. Any other key documents executed for the transaction

### Validity of the provisional rating

The trust is expected to complete the pending actions/execute the pending documents in the near term. However, in case of continued pendency of the actions/documents beyond one year of this publication, the provisional rating would be withdrawn for the transaction even if the instrument has been issued.

### Risks associated with the provisional rating

In case the issuance is completed, but the pending actions/documents are not completed for the transaction within one year (validity period) from the assignment of the rating, the provisional rating will be withdrawn in accordance with ICRA’s Policy on Provisional Ratings available at [www.icra.in](http://www.icra.in).

### About the originator

Sarvagram Fincare is a non-deposit taking NBFC that focuses on providing suitable credit products to households with multiple sources of income in Rural India. It was incorporated in June 2019, and the corporate office is located in Mumbai. Sarvagram Solutions Private Limited (SSPL), the parent company, provides technology solutions and provides digital platform and market

linkages for rural India. Till FY2021, Sarvagram was an associate of SSPL (SSPL held only around 38.8% stake in Sarvagram). In FY2022, SSPL increased the stake to 62%, and Sarvagram became the subsidiary of SSPL.

The company caters to “households” and not individual customers, with a focus on middle-income rural profiles. Sarvagram is focused on developing a deep-rooted distribution network and their target market is around 80 million middle income households out of the 200 million rural households in India. Currently, only around 7-8% households which Sarvagram caters, don’t have a credit history. The company also has adequate systems and processes to assess the income of borrowers.

The insurance business, farm mechanization etc. are at the holding company level and any new non-lending business opened would also be held at the holding company level. The company aspires to reach million plus households across 500 different catchments, over next 4 years or so.

### Complexity level of the rated instrument

Instrument	Complexity indicator
Series A1 PTC	Highly Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click here](#)
