August 28, 2026

IIFL Samasta Finance Limited: Rating reaffirmed for PTCs issued under a microfinance loan receivables securitisation transaction

Summary of rating action

Trust name	Instrument*	Initial rated amount (Rs. crore)	Amount O/s after last surveillance (Rs. crore)	Current rated amount (Rs. crore)	Rating action	Financial Sector Regulator#
Colosso 06 2025	PTC Series A1	82.15	NA	13.89	[ICRA]AA+(SO); reaffirmed	RBI

**Instrument details are provided in Annexure I;*

#SEBI's grievance redressal/dispute resolution and SEBI investor protection mechanisms such as SCORES and ODR shall not be available for activities and instruments which fall under the regulatory purview of Financial Sector Regulators other than SEBI.

Rationale

The pass-through certificates (PTCs) are backed by a pool of microfinance loan receivables originated by IIFL Samasta Finance Limited (Samasta/Originator). Samasta is also the servicer for the transaction.

The rating action for PTC Series A1 factors in the build-up of the credit enhancement cover over the future PTC payouts on account of high pool amortisation and the low expected balance tenor of the PTCs. The rating also draws comfort from the fact that the breakeven collection efficiency is lower than the actual collection levels observed in the pool as of the July 2026 payout month.

Pool performance summary

Parameter	Colosso 06 2025
Payout month	July 2026
Months post securitisation	14
Pool amortisation (as % of initial pool principal)	72.74%
PTC Series A1 amortisation	83.10%
Cumulative collection efficiency[1]	97.71%
Cumulative prepayment rate	24.09%
Monthly collection efficiency for Jul-26 payout	95.32%
Loss-cum-30+ days past due (dpd[2]; % of initial pool)	2.69%
Loss-cum-90+ dpd[3] (% of initial pool)	2.42%
Cumulative cash collateral (CC) utilisation	0.00%
Breakeven collection efficiency[4] for PTC Series A1	18.77%
CC available (% of balance pool)	34.66%
Excess interest spread (EIS; % of balance pool) for PTC Series A1[5]	10.64%
Principal subordination (% of balance pool principal) for PTC Series A1	45.71%

[1] *(Cumulative current and overdue collections till date)/(Cumulative billing till date + Opening overdues at the start of the transaction)*
[2] *Inclusive of unbilled and overdue principal portion of contracts delinquent for more than 30 days, as a % of Initial pool principal*
[3] *Inclusive of unbilled and overdue principal portion of contracts delinquent for more than 90 days, as a % of Initial pool principal*
[4] *(Balance cash flow payable to investor – CC available)/Balance pool cash flow*
[5] *(Pool interest – Interest to PTC Series A1 investors)/Pool principal outstanding*

Transaction structure

As per the transaction structure, the monthly cash flow schedule comprises the promised interest payout. The principal is expected to be paid on a monthly basis (100% of the pool principal billed) but is promised on the final maturity date. The residual cash flows from the pool, after meeting the promised and expected payouts, will flow back to the Originator on a monthly basis. Any prepayment in the pool would be used for the prepayment of the PTC Series A1 principal. The transaction has certain predefined trigger events on the occurrence of which the residual cash flows would be passed on to PTC Series A1 investors.

Key rating drivers and their description

Credit strengths

Build-up of credit enhancement – The rating factors in the build-up in the credit enhancement with the subordination increasing to ~46% of the balance pool principal from 12.43% at the time of securitisation. Credit support is also available through cash collateral (CC) of ~35% and excess interest spread (EIS) of ~10.6% of the balance pool principal. There has been no CC utilisation in the pool in any of the months post securitisation.

Adequate servicing capability of originator – The company has adequate processes for servicing the loan accounts in the securitised pool. It has a track record of over a decade of regular collections across a wide geography.

Credit challenges

Risks associated with lending business – The pool's performance would remain exposed to macroeconomic shocks, business disruptions and natural calamities that may impact the income-generating capability of the borrowers and their ability to make timely repayments of their loans. The performance of microfinance loans would also be exposed to political and communal risks.

Vulnerable asset quality in microfinance sector – The microfinance sector has seen lower collections and elevated delinquencies on account of borrower overleveraging and attrition in collection teams in the past. However, portfolio collections and asset quality are better from the post guardrail book which is a source of comfort.

Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pool, ICRA has estimated the shortfall in the pool principal collection during their tenure at 2.50% of the initial pool principal with certain variability around it. The average prepayment rate for the pool is modelled in the range of 3% to 9% per annum. Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the final rating for the instrument.

Details of key counterparties

The key counterparties in the rated transaction are as follows:

Transaction name	Colosso 06 2025
Originator	IIFL Samasta Finance Limited
Servicer	IIFL Samasta Finance Limited
Trustee	IDBI Trusteeship Services Limited
CC holding bank	HSBC Bank (India) Limited
Collection and payout account bank	HSBC Bank (India) Limited

Liquidity position: Superior

The liquidity for PTC Series A1 is superior after factoring in the credit enhancement available to meet the promised payout to the investor. The total credit enhancement would be more than 10 times the estimated loss in the pool.

Rating sensitivities

Positive factors – The rating may be upgraded when CC fully covers future PTC payouts.

Negative factors – The rating could be downgraded on the sustained weak collection performance of the underlying pool of contracts, leading to further increase in delinquency levels. Weakening in the credit profile of the servicer (Samasta) could also exert pressure on the rating.

Analytical approach

The rating action is based on the performance of the pool till the July 2026 payout month, the present delinquency profile of the pool of contracts, the performance expected over the balance pool tenure, and the credit enhancement available in the transaction.

Complexity level of the rated instrument

Trust name	Instrument	Complexity indicator
Colosso 06 2025	PTC Series A1	Highly Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: Click here
