### Rationale and key rating drivers

The rating assigned is basis the portfolio of the scheme with the credit score of the portfolio being comfortable at the assigned rating level<sup>1</sup>.

The ratings indicate ICRA's opinion on the credit quality of the portfolios that the funds hold. The ratings don't indicate the AMC's willingness, or ability, to make timely payments to the fund's investors. The ratings should not be construed as an indication of expected returns, prospective performance of the mutual fund scheme, NAV or of volatility in its returns.

ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores". These scores are based on ICRA's estimates of the credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories and maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

## Liquidity position: Not applicable

## Rating sensitivities

**Positive triggers** – Not applicable

**Negative triggers** – ICRA could downgrade the rating of the scheme if the credit quality of the underlying investment deteriorates or the size of assets under management (AUM) declines, which may result in an increase in the share of lower rated investments leading to a breach in the threshold for the rating level.
