## Mohindra Fasteners Limited: Ratings reaffirmed

### Summary of rating action

| Instrument*                 | Previous Rated Amount<br>(Rs. crore) | Current Rated Amount<br>(Rs. crore) | Rating Action                  |
|-----------------------------|--------------------------------------|-------------------------------------|--------------------------------|
| Long Term - Fund Based      | 19.00                                | 19.00                               | [ICRA]BBB (Stable); Reaffirmed |
| Short Term - Non-fund Based | 20.00                                | 20.00                               | [ICRA]A3+; Reaffirmed          |
| <b>Total</b>                | <b>39.00</b>                         | <b>39.00</b>                        |                                |

\*Instrument details are provided in Annexure-1

### Rationale

The ratings continue to favourably factor in the promoters' extensive experience and the established position of Mohindra Fasteners Limited's (MFL) as a supplier of fasteners in the global market. Moreover, with an increase in exports and an increasing proportion of specialised fasteners in its overall revenue mix, the company's operating profitability has steadily improved. Consequently, its debt coverage indicators have also strengthened. Further, ICRA notes the company's adequate liquidity profile at present, aided by sizable cash and liquid funds along with sufficient unutilised buffer available on sanctioned working capital limits. Further, ICRA positively notes the company's established as well as diversified customer base, across various end-user industries.

The ratings, however, are constrained by MFL's relatively modest scale of operations that limit its economies of scale. ICRA also notes the moderation in the company's revenues in FY2020 following a weakness in global as well as domestic demand. Further, with the majority of the revenues being derived from the European market, the company faces high geographical-concentration risk. ICRA also notes that the near-term business environment remains challenging for the company due to the prevailing Covid-19 pandemic-linked disruptions. Thus, ICRA expects the company's top line for FY2021 to remain under pressure, with the recovery primarily dependent upon the relaxation and normalisation of economic activities. The ratings also consider the vulnerability of the company's profitability to any adverse currency fluctuations along with fluctuations in steel (key raw material) prices. Additionally, MFL plans to incur a debt-funded capital expenditure in the next two years. While the expansion bodes well for the company's medium-term revenue growth prospects, the same may result in a slight moderation in its profitability and capital structure over the medium term. The ratings also take into account the fragmented nature of the domestic fasteners industry, which adds to the competitive pressure, and the high working capital intensity inherent in the business due to high inventory holding requirements.

The Stable outlook on the rating reflects ICRA's opinion that MFL will continue to benefit from its established presence in the export market and its long relations with its key customers.

### Key rating drivers and their description

#### Credit strengths

**Experienced management with long track record in industry with established stakeholder relationships** – The promoters have been involved in the fastener manufacturing industry for more than two decades. Their relationship with original equipment manufacturers (OEMs) and suppliers has helped the company to grow at a healthy pace in the past.

**Fairly diversified customer profile across segments** – The company has been supplying to reputed OEMs in the domestic market like Hero MotoCorp Limited with which it enjoys repeat business. Moreover, MFL has long associations with its overseas customers, and has increased its business share with the same. The company has a moderately diversified customer base in both domestic and exports market with the top five clients accounting for <50% of its overall sales in FY2020. In addition, MFL has a diversified presence across various segments including automotive, industrial, railways, home appliances, etc.

**Comfortable financial risk profile** – The company has a comfortable financial risk profile, characterised by conservative capital structure and healthy debt coverage metrics. The prudent use of working capital, along with an increase in accruals, led to comfortable gearing and TOL/TNW at 0.2 times and 0.6 times, respectively as on March 31, 2020. Further, the debt protection measures were healthy due to controlled leverage and healthy profitability. ICRA also notes the capex plan underway (expected to be concluded over the next two years), which is likely to put some pressure on the company's coverage metrics going forward.

## Credit challenges

**Moderate scale of operations with near-term demand prospects impacted by Covid-19 pandemic** – MFL continues to operate at a moderate scale, which limits economies of scale. Moreover, given the weakness in demand, the company reported a revenue decline in FY2020. Additionally, the pandemic and associated lockdown as well as demand slowdown would continue to pose challenges over the near term.

**High working capital intensity** – MFL's operations remain working capital-intensive owing to high inventory levels. In addition, with the change in the company's raw material procurement policy, and focus on domestic suppliers, the working capital intensity may increase in the near term because of the relatively short credit period offered by it.

**Profitability remains exposed to fluctuations in steel price movements and foreign exchange** – The price of steel, which is the key raw material, moves in tandem with the commodity cycle and hence, is subject to fluctuations. In the absence of price variation clauses in its contracts, the company's ability to pass on any price increases to its customers remains limited. Also, the high bargaining power of its customers is a credit negative. As a result, MFL continues to be exposed to adverse variations in raw material prices. Further, with no formal hedging policy in place, the company's profitability remains exposed to adverse fluctuations in foreign currency.

**Intense competition from well-established players in the industry** – MFL faces competition from well-established players as well as unorganised players, which limits its pricing power. Further, with the majority of the revenues being derived from the European market, the company faces high geographical-concentration risk.

**Proposed capacity expansions to result in increased debt levels** – The planned capital expenditure in the next two years will result in an increase in the debt levels. Correspondingly, the company's profitability indicators are expected to moderate because of overhead costs related to setting up of the new plant. The impact on its capitalisation and coverage indicators will be sensitive to the scale up of operations at the said plant.

## Liquidity position: Adequate

MFL's liquidity is **adequate** supported by expectation of healthy cash flow generation, although likely to be lower than the previous year. This, along with surplus cash balances (Rs. 18.56 crore as on March 2020) and nil long-term debt repayment obligation, is likely to support MFL's liquidity. The moderate utilisation of working capital limits further supports the company's liquidity.

## Rating sensitivities

**Positive triggers** – Sustained improvement in business risk profile, characterised by expansion in product portfolio and significant scale up in operations, while maintaining profitability indicators, credit metrics and liquidity profile at the current healthy levels would be critical for an upward rating revision.

**Negative triggers** – Downward pressure on MFL's rating could arise if the impact of the pandemic results in prolonged weakness in operating metrics. Significant debt-funded capex leading to weakening of debt servicing indicators and liquidity position may result in a rating downgrade. A specific credit metric that may lead to a downgrade of MFL's rating is total debt/OPBDITA above 2.5 times on a sustained basis.

## Analytical approach

## About the company

MFL manufactures high tensile fasteners for the automobile industry and industrial applications. It manufactures various types of hot- and cold-forged fasteners, i.e. screws, studs, bolts, etc., at its three manufacturing facilities at Rohtak. In addition to catering the domestic market, MFL derives more than half of its total revenue from exports to Europe and North America.

## Key financial indicators (audited)

|  | FY2019 | FY2020 |
|--|--------|--------|
| Operating Income (Rs. crore)                         | 134.8  | 101.5  |
