IIFL Samasta Finance Limited: Ratings confirmed as final for PTCs backed by microfinance loan receivables issued by 2025 02 MFI COSINE

Summary of rating action

Trust Name	Instrument*	Initial Rated Amount (Rs. crore)	Current Rated Amount (Rs. crore)	Rating Action
2025 02 MFI COSINE	PTC Series A1	86.93	80.81	[ICRA]AA(SO); provisional rating confirmed as final
	PTC Series A2	3.91	3.63	[ICRA]A+(SO); provisional rating confirmed as final

*Instrument details are provided in Annexure I

Rationale

In March 2025, ICRA had assigned Provisional [ICRA]AA(SO) rating to Pass Through Certificate (PTC) Series A1, and Provisional [ICRA]A+(SO) rating to PTC Series A2, issued by 2025 02 MFI COSINE. The PTCs are backed by a pool of a microfinance loan receivables originated by IIFL Samasta Finance Limited (Samasta/Originator) with an aggregate principal outstanding of Rs. 97.68 crore (pool receivables of Rs. 116.94 crore). Subsequently there has been a revision in the pool principal to Rs. 90.80 crore (pool receivables of Rs. 108.72 crore) and thus the PTC amounts have been reduced. Samasta is the servicer for the transaction.

Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said ratings have now been confirmed as final.

Pool performance summary

Parameter	2025 02 MFI COSINE
Months post securitisation	3
Pool amortisation	24.60%
PTC Series A1 amortisation	27.68%
PTC Series A2 amortisation	0.00%
Cumulative prepayment rate	4.15%
Cumulative collection efficiency	98.79%
Loss cum 0+ dpd	2.51%
Loss cum 30+ dpd	1.53%
Loss cum 90+ dpd	0.00%
Cumulative cash collateral utilisation	0.00%

Transaction structure

As per the transaction structure, the collections from the pool, after making the promised interest payouts to PTC Series A1, will be used to make the expected principal payouts to PTC Series A1, followed by the expected interest payout to PTC Series A2. Post the maturity of PTC Series A1, interest payouts will be promised to PTC Series A2 and all excess cash flows, after meeting the promised interest PTC Series A2 payouts, will be passed on for the expected PTC Series A2 principal payout. The entire principal repayment to PTC Series A1 and PTC Series A2 is promised on the scheduled maturity date. The excess interest spread (EIS) available after meeting the expected and promised PTC payments will be passed on to the originator (in case there are no EIS trigger events), in case of an EIS trigger event, the EIS available will be used for accelerated redemption of PTC Series A1 (until PTC Series A1 are outstanding) and post that for redemption of PTC Series A2.

The credit enhancement available in the structure is in the form of (i) a cash collateral (CC) of 7.00% of the pool principal to be provided by the Originator, (ii) subordination of 11.00% of the pool principal for PTC Series A1 and subordination of 7.00% of the pool principal for PTC Series A2, (iii) EIS of 15.03% of the pool principal for PTC Series A1 and EIS of 14.35% of the pool principal for PTC Series A2

Key rating drivers and their description

Credit strengths

Granular pool supported by presence of credit enhancement – The pool is granular, consisting of 24,948 contracts, with no contract exceeding 0.1% of the pool principal, thereby reducing the exposure to any single borrower. Further, the credit enhancement available in the form of the CC, subordination and EIS would absorb some amount of the losses in the pool and provide support in meeting the PTC payouts.

No overdue contracts in the pool – The pool has been filtered in such a manner that there are no overdue contracts as on the cut-off date.

Seasoned contracts in the pool – The pool has amortised by almost 40% as on the cut-off date with no delinquencies seen in any of the contracts, post loan disbursement, thereby reflecting the borrowers' relatively better credit profile.

Adequate servicing capability of the originator – The company has adequate processes for servicing of the loan accounts in the securitised pool. It has a demonstrated track record of over a decade of regular collections across multiple geographies.

Credit challenges

High geographical concentration – The pool has high geographical concentration with the top 3 states, viz. Tamil Nadu, Rajasthan and West Bengal, contributing around 51% to the initial pool principal amount. The pool's performance would thus be exposed to any state-wide disruption that may occur due to natural calamities, political events, etc. Nonetheless, the contracts are well-diversified across multiple districts with the top 10 districts constituting around 22% of the initial pool amount, which alleviates the concentration risk to some extent.

Risks associated with lending business – The pool performance would remain exposed to macro-economic shocks, business disruptions and natural calamities that may impact the income-generating capability of the borrowers and their ability to make timely repayments of their loans. The performance of microfinance loans would also be exposed to political and communal risks.

Increasing delinquencies in microfinance sector – The microfinance sector has seen a decline in collections and consequently rise in delinquencies in the previous fiscal on account of multiple factors like heat wave, general elections, borrower overleveraging and attrition in collection teams. Any sustained impact of these factors on the collections from the pool would be monitorable.

Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pool, ICRA has estimated the shortfall in the pool principal collection during its tenure at 4.50% of the initial pool with certain variability around it. The average prepayment rate for the underlying pool is modelled in the range of 3% to 9% per annum. Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences

of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the final rating for the instrument.

Details of key counterparties

The key counterparties in the rated transaction are as follows:

Transaction Name	2025 02 MFI COSINE
Originator	IIFL Samasta Finance Limited
Servicer	IIFL Samasta Finance Limited
Trustee	Catalyst Trusteeship Limited
CC holding Bank	ICICI Bank Limited
Collection and payout account Bank	ICICI Bank Limited

Liquidity position

The liquidity for PTC Series A1 and PTC Series A2 is strong after factoring in the credit enhancement available to meet the promised payouts to the investor. The total credit enhancement is ~5.75 times the estimated loss in the pool for PTC Series A1 and ~5.00 times the estimated loss in the pool for PTC Series A2.

Rating sensitivities

Positive factors – The sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and an increase in the cover available for future investor payouts from the credit enhancement would result in a rating upgrade.

Negative factors – The sustained weak collection performance of the underlying pool of contracts (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher credit enhancement utilisation levels, would result in a rating downgrade. Weakening in the credit profile of the servicer (Samasta) could also exert pressure on the rating.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Complexity level of the rated instrument

Instrument	Complexity Indicator
PTC Series A1	Moderately Complex
PTC Series A2	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
