Rationale and key rating drivers

The ratings for ICICI Prudential Asset Management Company Limited's schemes have been reaffirmed following ICRA's monitoring of the credit risk profile of the month-end portfolio position of these schemes. The credit risk scores for these schemes were comfortably within the benchmark limits for their current rating levels.

Mutual fund ratings incorporate ICRA's assessment of the creditworthiness of a debt mutual fund scheme's investment portfolio. These ratings are a symbolic representation of the credit risk in the underlying investments or the degree of safety regarding the timely receipt of payments from the investments that have been made by the mutual fund schemes. The ratings do not indicate the asset management company's (AMC) and/or any of its scheme's willingness and/or ability to make timely redemptions to its investors. The ratings do not address the market risks and hence should not be construed as an indication of the expected returns, the prospective performance of the mutual fund scheme, and the ability to redeem the investments at the reported net asset value (NAV) or the volatility in its past returns as all these are influenced by market risks.

ICRA's assessment of debt mutual fund schemes is guided by the credit ratings of the individual investments, the relative share of the investments in the overall assets under management (AUM) of the scheme and the maturity schedule of such investments. The credit matrix is a tool used by ICRA for analysing the investment portfolio of the debt mutual fund schemes by assessing the portfolio's aggregate credit quality while reviewing the credit quality of each underlying debt security. The portfolio's weighted average credit quality is then measured against the appropriate benchmark credit score in the credit matrix.

Once a mutual fund scheme is rated and the rating is accepted, ICRA reviews the underlying investment portfolios for the credit scores on an ongoing basis. If the portfolio credit score meets the benchmark of the existing rating, the rating is retained. If the portfolio credit score breaches the benchmark credit matrix score for the current rating, ICRA communicates the same to the fund manager/product manager or other officials of the concerned AMC and may provide a month's time to bring the portfolio credit score within the benchmark credit score for the current rating level. If the investment composition of the fund is realigned to bring the portfolio credit score within the benchmark credit score, the rating is retained. However, if the portfolio continues to breach the benchmark credit score for the existing rating level, the rating is revised to reflect the change in the portfolio's credit quality. In case of sharp breaches of the benchmark credit score (for instance due to a multi-notch downgrade in the underlying investment) and/or if ICRA believes that the breach may not get rectified within a month of the

ongoing review, the rating is generally corrected immediately without giving a month's time for rebalancing the portfolio.

Liquidity position: Not applicable

Rating sensitivities

Positive factors – Not applicable

Negative factors – ICRA could downgrade the rating of the schemes if the credit quality of the underlying investment deteriorates or the size of the AUM declines, which may result in an increase in the share of the lower rated investments, leading to a breach in the threshold for the rating level.

Negative factors for ICICI Prudential Overnight Fund – ICRA could downgrade the rating of the scheme if the credit quality of the underlying investments deteriorates, leading to a breach in the threshold for the rating level.

Complexity level of the rated instrument

Instrument Name	Complexity Indicator
Mutual Fund	Not Applicable

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional, or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: www.icra.in
