NeoGrowth Credit Private Limited: Rating confirmed as final for PTCs issued under an unsecured MSME business loan securitisation transaction

Summary of rating action

Trust Name	Instrument*	Initial Rated Amount (Rs. crore)	Current Rated Amount (Rs. crore)	Rating Action	Financial sector regulator#
NEPTUNE TRUST MARCH 2026	Series A PTC	44.57	44.57	[ICRA]A(SO); provisional rating confirmed as final	RBI

*Instrument details are provided in Annexure I

#**Disclosure:** SEBI's grievance redressal/dispute resolution and SEBI investor protection mechanisms such as SCORES and ODR shall not be available for activities and instruments which fall under the regulatory purview of Financial Sector Regulators other than SEBI.

Rationale

ICRA had assigned provisional rating to the pass-through certificates (PTC) issued by NEPTUNE TRUST MARCH 2026 under a securitisation transaction originated by NeoGrowth Credit Private Limited {NCPL/Originator; rated [ICRA]BBB (Negative)}¹. The PTCs are backed by a pool of unsecured micro, small and medium enterprise (MSME) loan receivables originated by NCPL with an aggregate principal outstanding of Rs. 51.23 crore (pool receivables of Rs. 64.47 crore). NCPL would also act as the servicer for the transaction.

Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating has now been confirmed as final.

Pool performance summary

Parameter	NEPTUNE TRUST MARCH 2026
Payout month	July 2026
Months post securitisation	4
Pool amortisation	24.1%
Series A1 PTC amortisation	34.5%
Cumulative prepayment rate ²	6.3%
Cumulative collection efficiency ³	93.9%
Loss-cum-0+ dpd ⁴	5.5%
Loss cum 30+ dpd ⁵	1.5%
Loss cum 90+ dpd ⁶	0.3%
Cumulative cash collateral utilisation	0.0%

Transaction structure

As per the transaction structure, the monthly cash flow schedule comprises the promised interest payout. The principal is expected to be paid on a monthly basis (100% of the pool principal billed) but is promised on the final maturity date. Any

¹ The current rating rationale of the originator, available at this [link](#), provides its detailed rating history and rating transitions

² Principal outstanding at the time of prepayment of contracts prepaid till date / Initial pool principal

³ Cumulative collections till date including advance collections but excluding prepayments / Cumulative billings till date + Opening overdues

⁴ POS on contracts aged 0+ dpd + Overdues / Initial POS on the pool

⁵ POS on contracts aged 30+ dpd + Overdues / Initial POS on the pool

⁶ POS on contracts aged 90+ dpd + Overdues / Initial POS on the pool

surplus excess interest spread (EIS), after meeting the promised payouts, will flow back to the Originator on a monthly basis. Any prepayment in the pool would be used for the prepayment of Series A PTC principal.

The credit enhancement available in the structure is in the form of (i) a cash collateral (CC) of 6.00% of the initial pool principal, amounting to Rs. 3.07 crore, provided by the Originator, (ii) subordination of 13.00% of the initial pool principal for Series A PTC in the form of equity tranche and (iii) the excess interest spread (EIS) of 19.86% of the initial pool principal for Series A PTC.

Key rating drivers and their description

Credit strengths

Granular pool supported by presence of credit enhancement – The pool is granular, consisting of 285 contracts, with top 10 contracts forming only ~10% of the pool principal, thereby reducing the exposure to any single borrower. Further, the credit enhancement available in the form of the CC, subordination and EIS would absorb some amount of the losses in the pool and provide support in meeting the PTC payouts.

No overdue contracts in the pool – The pool has been filtered in such a manner that there are no overdue contracts as on the cut-off date. Further, none of the contracts in the pool have never been delinquent, which is a credit positive.

Servicing capability of NCPL – The company has adequate processes for servicing of the loan accounts in the securitised pool. It has demonstrated a considerable track record of regular collections and recovery across a wide geography and multiple economic cycles.

Credit challenges

High geographical concentration – The pool has high geographical concentration with the top 3 states, viz. Maharashtra, Karnataka and Delhi contributing ~75% to the initial pool principal amount. The pool's performance would thus be exposed to any state-wide disruption that may occur due to natural calamities, political events, etc.

Risks associated with lending business – The pool's performance would remain exposed to macro-economic shocks, business disruptions and natural calamities that may impact the income-generating capability of the borrowers and their ability to make timely repayments of their loans. The pool is exposed to the inherent credit risk associated with the unsecured nature of the asset class and that recovery from delinquent contracts tends to be lower.

Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pool, ICRA has estimated the shortfall in the pool principal collection during its tenure at 7.00%, with certain variability around it. The average prepayment rate for the underlying pool is modelled in the range of 4.8% to 18% per annum. Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the final rating for the instrument.

Liquidity position: Strong

The liquidity for Series A1 PTC is strong after factoring in the credit enhancement available to meet the promised payout to the investor. The total credit enhancement would be ~4.75 times the estimated loss in the pool.

Details of key counterparties

The key counterparties in the rated transaction are as follows:

Transaction Name	NEPTUNE TRUST MARCH 2026
Originator	NCPL
Servicer	NCPL
Trustee	Catalyst Trusteeship Limited
CC holding Bank	RBL Bank
Collection and payout account Bank	ICICI Bank Limited

Rating sensitivities

Positive Factors – The sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and an increase in the cover available for future investor payouts from the credit enhancement would result in a rating upgrade.

Negative Factors - The sustained weak collection performance of the underlying pool (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher credit enhancement utilisation levels, would result in a rating downgrade. Weakening in the credit profile of the servicer could also exert pressure on the rating.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Complexity level of the rated instrument

Instrument	Complexity indicator
Series A PTC	Highly Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click here](#)
