Belagavi Expressways Private Limited: Rating reaffirmed

Summary of rating action

Instrument*	Previous rated amount (Rs. crore)	Current rated amount (Rs. crore)	Rating action	Financial sector regulator [#]
Long-term – Fund-based – Term loan	450.00	450.00	[ICRA]BBB+ (Stable); Reaffirmed	RBI
Total	450.00	450.00		

*Instrument details are provided in Annexure I

[#]SEBI's grievance redressal/dispute resolution and SEBI investor protection mechanisms such as SCORES and ODR shall not be available for activities and instruments which fall under the regulatory purview of financial sector regulators other than SEBI.

Rationale

The rating reaffirmation for Belagavi Expressways Private Limited (BEPL) favourably factors in the inherent benefits of the hybrid annuity-based (HAM) nature of the project. The rating considers the stable revenue stream after commissioning, with the credit profile likely to be supported by adequate projected debt service coverage ratios (DSCR) during the debt tenure and structural features of the debt. The rating notes the provision for reserves creation includes a debt service reserve account (DSRA) equivalent to six months of principal and interest (P+I) (to be created out of the first two annuities), and a major maintenance (MM) reserve.

The rating is, however, constrained by execution risks associated with the under-construction project, including exposure to potential time and cost overruns. The project received the appointed date on July 18, 2025, and achieved physical progress of 38.54% as on June 30, 2026, against the scheduled progress of 47.5%, reflecting a delay of around two months. The postponement is primarily attributable to the pending handover of the balance 19.68% land of the project stretch, non-availability of continuous right of way (RoW), delays in removal of encumbrances and obtaining necessary approvals such as tree-cutting and change-of-scope from the respective authorities. BEPL is jointly promoted by Bekem Infra Projects Private Limited (Bekem, rated [ICRA]A (Stable)) and DHD Infracon Private Limited (DHD) in the ratio of 40:60. The company has entered a fixed-price engineering, procurement and construction (EPC) contract with DHD. BEPL's credit profile remains exposed to the modest credit profile of its EPC contractor (DHD), along with the execution and funding risks associated with the projects. The company's ability to commission the project in a timely manner and within the budgeted costs would remain important. Nevertheless, ICRA notes that both the sponsors, DHD as well as Bekem, have provided joint and several corporate guarantees toward the borrowings of the projects, which should ensure adequate and timely funding support from Bekem, if any. Further, Bekem has provided an undertaking towards financial support in case of cost overrun during the construction phase, any shortfall in operations and maintenance (O&M) expenses and debt servicing in the operational phase as per the lender's approved base case business plan, which provides comfort.

In addition, project execution was impacted by the ongoing West Asia conflict (resulting in supply disruptions and delays in procurement of construction inputs) and monsoon-related challenges, affecting the pace of construction. While it has achieved two project milestones (PMS I and II) within the scheduled timeline and is expected to achieve the subsequent milestones within the contractual buffer period, timely ramp-up in execution remains critical as it has a limited grace period of 90 days beyond the scheduled completion date under the Concession Agreement (CA). As on June 30, 2026, the balance project cost of around Rs. 623.2 crore (including GST) is proposed to be funded through undrawn term debt of Rs. 360.4 crore, pending NHAI grant receipts of Rs. 167.4 crore and balance promoter contribution of Rs. 96.2 crore. Bekem and DHD are adequately placed to fund the balance promoter contribution in BEPL in a timely manner for project completion. The company's ability to commission the project in a timely manner and within the budgeted costs would remain important from the credit perspective.

Moreover, timely support from sponsor to fund any shortfalls due to delays in grant or any cost overruns during the construction phase will remain crucial.

Post commissioning, BEPL's debt coverage metrics remain exposed to the risk of deductions from annuity and O&M receipts, as it will have to undertake O&M of the project stretch as per the CA and ensure healthy lane availability to avoid any deductions. Once operational, the special purpose vehicle's (SPV) ability to undertake the O&M within the budgeted costs will be a key rating monitorable. During the under-construction stage, the ability to timely complete the project within the stipulated budget remains crucial.

The Stable outlook on the rating reflects ICRA's opinion that BEPL will benefit from the hybrid annuity nature of the project and moderate sponsor profile.

Key rating drivers and their description

Credit strengths

Lower inherent risks in HAM projects from the NHAI – The inherent benefits of the hybrid annuity-based nature of the project include an upfront availability of RoW, automatic de-scoping of RoW pending beyond 180 days from the appointed date and inflation-linked revisions to the bid project cost (BPC) during the construction period. Moreover, it faces relatively lower equity mobilisation risk with 40% of the BPC to be funded by the authority during the construction period in the form of a grant. A stable revenue stream after commissioning of the project with 60% of the inflation-adjusted BPC being paid out as annuity, along with interest at an average of one-year MCLR of the top five scheduled commercial banks + 1.25% and the inflation-adjusted O&M cost bid over the 15-year operations period by the project owner, the NHAI, which is a strong counterparty offer comfort.

Adequate projected coverage indicators and presence of structural features – BEPL, once operational, is expected to have adequate debt coverage indicators. This provides the SPV sufficient cushion to withstand any adverse movement in inflation and increase in operational expenses to an extent. Moreover, the sponsor's undertaking towards cost overrun during the construction phase and any shortfall in O&M expenses and debt servicing in the operational phase offers comfort. Further, the presence of structural features of the debt, including the presence of escrow, a cash flow waterfall mechanism, provision for creation of reserves and a restricted payment clause with a minimum DSCR of 1.04 times, provides comfort. The provision for reserves creation includes a DSRA equivalent to six months of principal and interest (P+I) (to be created out of the first two annuities), and a MM reserve.

Credit challenges

Execution risk related to under-construction project – The project received the appointed date on July 18, 2025, and achieved physical progress of 38.54% as on June 30, 2026, against the scheduled progress of 47.5%, reflecting a delay of around two months. The postponement is primarily attributable to the pending handover of the balance 19.68% land of the project stretch, non-availability of continuous RoW, delays in removal of encumbrances and obtaining necessary approvals such as tree-cutting and change-of-scope from respective authorities. In addition, project execution was impacted by the ongoing West Asia conflict (resulting in supply disruptions and delays in procurement of construction inputs) and monsoon-related challenges, affecting the pace of construction. While the project has achieved PMS-I and PMS-II within the scheduled timelines and is expected to achieve the subsequent milestones within the contractual buffer period, timely ramp-up in execution remains critical as it has a limited grace period of 90 days beyond the scheduled completion date under the CA. As on June 30, 2026, the balance project cost of around Rs. 623.2 crore (including GST) is proposed to be funded through undrawn term debt of Rs. 360.4 crore, pending NHAI grant receipts of Rs. 167.4 crore and balance promoter contribution of Rs. 96.2 crore. Bekem and DHD are adequately placed to fund the balance promoter contribution in BEPL, in a timely manner, for project completion. The company's ability to commission the project in a timely manner and within the budgeted costs would remain important from the credit perspective. Moreover, timely support from sponsor to fund any shortfalls due to delays in grant or any cost overruns during the construction phase will remain crucial.

Undertaking O&M as per concession requirement; cash flows and returns exposed to inflation risks – Post commissioning, BEPL's debt coverage metrics remain exposed to risk of deductions from annuity and O&M receipts, as it will have to undertake O&M of the project stretch as per the concession agreement and ensure healthy lane availability to avoid any deductions. Any significant deduction in annuity payments or material increase in regular or periodic MM expenditure beyond the budgeted levels could impact its coverage metrics. Nevertheless, the expected adequate coverage metrics of the company mitigate the risk of deductions or increase in operating expenses to an extent. Further, BEPL's cash flows are exposed to inflation risks as O&M receipts, though linked to the inflation index (70% WPI and 30% CPI), may not be sufficient to compensate for the actual increase in O&M and periodic maintenance expenses. Once operational, the SPV's ability to undertake the O&M within the budgeted costs will be a key rating monitorable. During the under-construction stage, the ability to timely complete the project within the stipulated budget remains crucial.

Liquidity position: Adequate

BEPL's liquidity position is adequate. As on June 30, 2026, the balance project cost of around Rs. 623.2 crore (including GST) is proposed to be funded through undrawn term debt of Rs. 360.4 crore, pending NHAI grant receipts of Rs. 167.4 crore and balance promoter contribution of Rs. 96.2 crore. Moreover, the presence of corporate guarantee till receipt of the first annuity and undertaking provided by Bekem towards financial support in case of a cost overrun or delay in the NHAI's grant during the construction phase, and any shortfall in the O&M expenses as well as debt servicing in the operational phase as per the lender's approved base case business plan, provides comfort.

Rating sensitivities

Positive factors – The rating could be upgraded if the project achieves PCOD without any time and cost overruns, along with the receipt of the first annuity without any major deductions.

Negative factors – Pressure on the rating could arise, if the project's progress is delayed resulting in significant time and cost overruns, or if there is a deterioration in the credit profile of the sponsor, thereby heightening the equity mobilisation risk, or if delays in the receipt of grant or equity infusion increase the funding risks for the project.

About the company

Belagavi Expressways Private Limited (BEPL), incorporated in April 2024, is an SPV promoted by DHD Infracon Private Limited (60% stake) and Bekem Infra Projects Private Limited (40%). The HAM SPV was formed for construction and maintenance of the access-controlled highway of Belgaum-Hungund-Raichur from Design Ch.000+000. (near Belgaum Ring Road) to Design Ch. 0.43+800 (near Rudrapur Tande village) on NH748A, in Karnataka (Package-I). It comprises a total design length of 43.8 km. BEPL was awarded the project through the competitive bidding process as it emerged the lowest bidder with BPC of Rs. 789.65 crore. The total project cost of Rs. 910.0 crore is proposed to be funded by equity of Rs. 144.12 crore, the NHAI's grant of Rs. 315.9 crore and debt of Rs. 450.0 crore. The project received the appointed date on July 18, 2025.

Key financial indicators (audited): Not applicable, as BEPL is a project stage company.

Status of non-cooperation with previous CRA: Not applicable

Complexity level of the rated instruments

Instrument	Complexity indicator
Long-term – Fund-based – Term loan	Simple

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click here](#)
