Indian Oil Corporation Limited: Rating assigned to bond programme

Summary of rating action

Instrument*	Previous Rated Amount (Rs. crore)	Current Rated Amount (Rs. crore)	Rating Action
Non-Convertible Debenture Programme	5000.00	5000.00	[ICRA]AAA(Stable); Outstanding
Non-Convertible Debenture Programme	0.00	3000.00	[ICRA]AAA(Stable) assigned
Commercial Paper	40,000.0	40,000.0	[ICRA]A1+; Outstanding
Total	45,000.0	48,000.0	

*Instrument details are provided in Annexure-1

Rationale

The ratings factor in IOC's high financial flexibility arising from its large sovereign ownership (51.5% stakes owned by the GoI), significant portfolio of liquid investments (~ Rs. 20,940 crore as on March 31, 2020 including GoI bonds and investments in GAIL (India) limited (GAIL, rated [ICRA]AAA(stable)/[ICRA]A1+), Oil & Natural Gas corporation (ONGC, rated [ICRA]A1+) and Oil India limited (OIL) as on March 31, 2020), and ability to raise funds from the domestic/foreign banking system and capital markets at competitive rates. Besides, the ratings of the company continue to reflect its dominant and strategically important position in the Indian energy sector, its integrated business model and its role in fulfilling the socio-economic objectives of the GoI.

The ratings take into account the diversified location base of the company's refineries (11 refineries on a consolidated basis). The ratings also reflect integration of IOC in marketing, pipelines, and petrochemicals segments (contributing 41%, 17% and 14% respectively in total EBITDA¹ for FY2019) reducing cyclicalities associated with the refining segment (contributing 22% of EBITDA in FY2019). The ratings also factor in the vulnerability of the company's profitability to the global refining margin cycle, import duty protection, and INR-USD parity levels. IOC is also exposed to project implementation risks as it is in the midst of implementing large projects spanning the entire downstream value chain, though the risk is largely mitigated by the company's proven track record of successfully implementing several large projects. The Gross Refining Margins (GRMs) of the company had weakened in FY2019 and with crude oil prices softening significantly in Q4 FY2020, the GRMs are expected to weaken materially in FY2020 owing to large inventory losses adversely impacting the cash generation in FY2020. The GRMs are expected to remain weak in FY2021 as well driven by lower capacity utilisation of refineries and weak crack spreads as the global economic activity is expected to remain subdued owing to the Covid-19 pandemic. While currently the operations remain limited, with easing of the lockdown restrictions the economic activity is expected to pick up and the refinery operations of the company are expected to normalise. In the marketing segment, on May 5, 2020 the GoI hiked the excise duty on petrol and diesel by Rs. 10/ litre and Rs. 13/litre respectively. Moreover, several State Governments have hiked the VAT on auto fuels over the last few weeks. The hikes in duties has reduced the marketing margins of the company sharply. The gross marketing margins had expanded in recent times as the impact of crude price decline was not passed on to the retail consumers.

IOC's performance has been impacted negatively by the Covid-19 pandemic led lockdown in India. The petroleum product demand has witnessed significant decline with diesel and petrol consumption declining 56% and 60% respectively. As a result, the refining operations had been running at around 40-50% capacity, though the capacity

¹ EBITDA: Earnings before Interest, Taxes, Depreciation, and Amortisation

utilisations have improved lately with the easing of lockdowns. Additionally, the petrochemical plants had to shut operations due to logistic issues. The petrochemical operations have also restarted albeit the production levels remain low and the overall capacity utilisation in FY2021 is expected to remain lower than FY2020.

IOCL will continue to be subjected to regulatory risks related to the pricing of sensitive petroleum products in an elevated crude oil price environment, however the past track record of the GoI to ensure low under-recovery levels for PSU OMCs provides comfort from the credit perspective. Any adverse change in the GoI's policy in this regard, resulting in a weakening of key credit metrics of IOCL will be a key rating sensitivity. There were large opening arrears of Rs 330 billion on account of under recoveries on the sale of sensitive products, which the GoI had not paid the OMCs in 2018-19 on account of under provisioning of subsidy. As per ICRA's estimates, subsidy requirement for FY2021 will be Rs 136 billion, assuming Indian basket crude price of \$30/bbl and INR/USD of 76.0. With lower subsidy requirement and lower crude oil prices, the working capital requirements of the company should ease somewhat in FY2021.

The Stable outlook on the [ICRA]AAA rating reflects ICRA's opinion that IOCL will continue to benefit from its dominant position in the domestic energy sector and its strategic importance to the GoI.

Key rating drivers and their description

Credit strengths

Strategic importance for the GoI in the domestic energy sector - IOC, being the largest oil refining and marketing company in India, commands considerable economic importance. The company holds significant strategic importance for GoI as it helps in meeting the socio-economic objectives of the government through control on prices of sensitive products like subsidised liquefied petroleum gas (LPG) and superior kerosene oil (SKO). The company is also the largest contributor to the government exchequer. Thus, the sovereign support is expected to continue going forward as well.

Dominant position in the domestic refining and marketing business - The company dominates the domestic refining sector with a share of ~32.5%. The company is also the leading public oil marketing company with a ~39.9% market share (including private players) as of end of FY2019 (as per consumption data from Petroleum Planning & Analysis Cell, PPAC). The company has the largest marketing network spanning across the country and actively undertakes multiple branding and customer loyalty initiatives.

Diversified location base of the refineries - The company owns and operates nine refineries spread across the country besides having a majority stake in Chennai Petroleum Corporation Limited (CPCL), which provides it control over an additional two refineries, taking the aggregate to eleven. Seven out of its nine refineries are located in inland areas. The most recently set up refinery at Paradip, being situated at the coast, has improved IOC's diversification from the perspective of land-locked vis-à-vis coastal presence.

Integration in marketing, pipelines, and petrochemicals segments reducing cyclicity associated with the refining segment – IOC's large marketing operations generate largely stable profits, although subject to risks related to regulatory developments and inventory gains/losses to some extent. Further, a large pipeline infrastructure owned by the company also results in stable cash generation for the company. The forward integration of IOC into petrochemical segment provides operational synergies, like conversion of surplus products in the country such as naphtha, into higher value petrochemicals (like HDPE, PP etc), which also lead to higher margins. Overall, significant integration across segments reduces the risks related to refining operations.

Considerable liquidity and financial flexibility derived from its investment portfolio and significant sovereign ownership: IOC continues to enjoy high financial flexibility, that has enabled it to borrow from the domestic and overseas banking system and capital markets at competitive rates, to fund its large working capital requirements and for

project finance. The same is supported by IOC's strong parentage arising from the GoI's 51.50% stake. The company's investments in ONGC, GAIL, and Oil India with current aggregate market value of ~Rs. 9,919.0 crore as on March 31, 2020 besides unsold stock of GoI Special Oil bonds and GoI securities of ~Rs. 11,021 crore as on March 31, 2020 provide considerable financial flexibility.

Credit challenges

Vulnerability of the company's profitability to the global refining margin cycle, import duty protection, and INR-USD parity levels - Given the nature of the business, the company would remain exposed to the movement in the commodity price cycles and the volatility in the crude prices. Any adverse changes in the import duty on its products would also have an impact on the company's domestic sales. The company's profitability is also exposed to the forex rates (INR-US\$) given the business is largely dollarized on sales, crude procurement and foreign currency loans.

Exposed to regulatory risks related to under-recoveries in an elevated crude oil price environment; consistent fall in consumption of kerosene to partly offset the risk – Higher crude oil prices, if sustained, lead to material increase in gross under-recoveries (GURs) as was witnessed in H1 FY2019 and consequently raise the working capital requirements and short-term debt levels of OMCs, thereby negatively impacting their profitability. ICRA expects GURs for OMCs to moderate from Rs. 374 billion in FY2019 to ~Rs. 242 billion in FY2020 (at crude price of US\$60.5/bbl and INR/USD of 70.9). Additionally, through a direct intervention by the Government of India (GoI) in October 2018 the OMCs were directed to reduce selling prices of Motor Spirit (MS) and High-Speed Diesel (HSD) owing to elevated prices of these auto fuels. Accordingly, the regulatory risks for IOC related to pricing of sensitive petroleum products and auto fuels remains in an elevated crude oil price environment, however the past track record of the GoI to ensure low under-recovery levels for PSU OMCs provides comfort from the credit perspective. Any adverse change in the GoI's policy in this regard, resulting in a weakening of key credit metrics of IOCL will be a key rating sensitivity

Significant project implementation risks, partly mitigated by the long-demonstrated history of IOC in implementing projects across refining, marketing, petrochemicals and pipelines segments: The company has significant capex plans spanning the entire downstream value chain with an outlay of ~Rs. 2,000 billion over next 6-7 years. The capex plans include the ongoing up-gradation of refineries for production of BS-VI compliant fuel, brownfield expansion of refineries, setting up of nearly 6,500 km of pipeline infrastructure, investments in setting up of retail infrastructure, setting up of petrochemical plants etc. Besides the company is also planning to set-up a mega refinery under a JV with other two PSU OMCs along with ADNOC and Saudi-Aramco on the west coast of India for nearly \$60 billion (IOC's share of \$15 billion). Any material time or cost overruns in the group projects could lead to an increase in the company's borrowing levels and moderation of credit metrics. However, the risk is largely mitigated by the company's proven track record of successfully implementing several large projects.

With the company increasing its upstream portfolio it is exposed to geological, technology and execution risks that are inherent in E&P activities – The company currently has upstream portfolio of 22 blocks (domestic and overseas) and has been actively trying to expand the same. However, increasing presence in the upstream sector exposes the company to geological, technological and execution risks that are inherent in E&P activities.

Liquidity position: Strong

IOCL's liquidity profile is expected to remain strong aided by adequate cash flow generation expected in FY2021 and sizeable short-term investments of ~Rs. 11,021 crore (including the GOI oil bonds and government securities) as on March 31, 2020. The company enjoys strong access to capital markets and high financial flexibility due to sovereign ownership.

Rating sensitivities

Positive triggers -NA

Negative triggers – Downward pressure on IOCL’s ratings could arise in the event of i) weakening in linkage with the Gol ii) materially large debt funded capex/acquisition resulting in the deterioration in the credit profile and iii) material increase in the net under-recoveries in a scenario of elevated crude oil prices or change in the under-recovery mechanism/pricing regime and delay in the under-recovery payout by the Gol.

Analytical approach:

Analytical Approach	Comments
Applicable Rating Methodologies	Corporate Credit Rating Methodology Rating Methodology for Downstream Oil Companies
Parent	Government of India: The ratings factor in implicit support from Gol in terms of support of the Gross Under Recoveries for LPG and SKO being borne by the Gol thus supporting the profitability of PSU OMCs.
Consolidation	For arriving at the ratings, ICRA has considered the consolidated financials of IOCL. ICRA has factored in the rated entity’s support to fund the equity component of the investment in its JV projects, any cost overruns and, and debt servicing support in the initial stage of operations. The subsidiaries and JVs of IOCL that have been considered are enlisted in Annexure 2.

About the company:

IOC is currently the largest corporate entity in India by sales. Government of India has 51.5% equity stake in the company. The company and its subsidiaries have a total refining capacity of 80.7 MMTPA, which is 32.5% (as on March 31, 2020) of the total domestic refining capacity. The company accounted for 39.9% of the total petroleum products sold within the country in FY2019. IOC also enjoys a dominant presence in the domestic crude and product transportation business, controlling significant share in the country’s total downstream pipeline capacity. The company has interests across the gas value chain as well, from LNG import terminals to city gas distribution networks (CGD). The company currently operates CGD networks in Agra and Lucknow through Green gas Limited (joint venture with GAIL (India) Limited); besides, the company is also implementing CGD projects in Chandigarh, Allahabad, Panipat, Daman, Ernakulam, Udham Singh Nagar, and Dharwad through IndianOil-Adani Gas Private Limited - a JV with the Adani group.
